Thread: [VMware Laggy Kali](#)

SiZe_Scopez - January 19, 2016, 11:57 am

Can i fix this problem my Kali linux is not smooth at all and it laggs alot

SirNoobHack - January 19, 2016, 11:58 am

Try adding more ram and cpu cores in vmware to the desired VM.

XMR - January 19, 2016, 2:47 pm

That's what you get for using a VM, that is common. Why not just use a live USB or even dual boot?

LaliKlinux - January 20, 2016, 5:07 pm

Its been laggy for everyone, common complaint. Id live USB boot until they make a fix for it

T0ucaNSaM - January 21, 2016, 2:53 pm

did you install vmware tools?

nn84743 - January 21, 2016, 3:31 pm

I'm also using Kali in VMware. It was really choppy, but since I installed VMware tools, it's been fine albeit not as fast as it would be when installed directly on the metal.

If you want to have full performance, it would be better to dual boot.
