Thread: [Post text doesn't show up on edit post page](#)

Houtarou - January 21, 2016, 4:41 pm

Okay guys so whenever I go to edit a post or thread on my forum, the original text/the text that is currently in the post does not show up in the edit box.

I have confirmed that it is only happening using my theme, it works perfectly fine with the default theme.

On default theme:

Spoiler [\(Click to View\)](#)

On my custom theme:

Spoiler [\(Click to View\)](#)

Anybody know how I can fix it to where the text shows up while using my theme? Thanks!

What theme are you currently using?

Could you link me to your forum, if possible?

Sent you a PM with it!

Figured out a solution to this. Thanks a TON for your help Wires!
