Thread: [Downgrade php version](#)

NightMareFromHell - January 23, 2016, 8:50 pm

okay soo my vps is currently running PHP Version 5.6.4-4ubuntu6.4.

but i want to run PHP Version 5.2.17 or lower, is there anyway i can downgrade this?.

And for those who wanted to know the OS is ubuntu.

dont know if this is right place to post this but yeah.

You could completly remove it:

Code sudo apt-get remove --purge php5Then install the version you want. This would remove any custom config you've done with your php installation though.
