Thread: [C++ app that turns off Monitor](#)

Deathskully66 - January 24, 2016, 4:31 pm

Well Guys i was Really bored Today so I wanted to make a C++ console application. This application lets your Monitor Sleep for a few seconds.

I added comments so you guys who are new to C++ can understand the code.

Link: www.mediafire.com/download/36gw25c6ouvhzb2/TurnOffMonitor.rar

I placed some spaces since i cant make a link yet so yea Enjoy.

Code `#include <Windows.h>`

```
int main()
{
    //turns off Monitor
    SendMessage(HWND_BROADCAST, WM_SYSCOMMAND, SC_MONITORPOWER,
(LPARAM)2);
    Sleep(5000); // the Monitor is turned off for 5 seconds
    //(Down) This line off code turns the monitor Back on.
    SendMessage(HWND_BROADCAST, WM_SYSCOMMAND, SC_MONITORPOWER,
(LPARAM)-1);
    return 0;
    // Returning 0 shuts off the application, so to run it again you would have to start it again.
```

} Well looks like i made a mistake, if u have Visual Studio 2015 or probably any VS start it and you will see the effects.
