Thread: [What do you use to monitor application outgoing connections](#)

Raaz - January 24, 2016, 10:34 pm

Say you have an application installed and you want to find out what component (process) of it is attempting to make a connection.

What programs allows such monitoring ? (except-
avast,eset,kaspersky,bitdefender,trendmicro,windows firewall) Thanks.

Check out TCPView

Quote:<https://technet.microsoft.com/en-us/sysinternals/tcpview.aspx>

Simple and works

archangel.dmitry - January 25, 2016, 9:47 am

As it was mentioned above, TCPView is a great program. Also, almost all 3rd party firewalls have tools to monitor current connections.

Raaz - January 25, 2016, 10:16 am

I've tried using eset's smart security firewall, with interactive mode and it fucked up my windows. Will try this tcpview thanks for replies.

archangel.dmitry - January 25, 2016, 10:40 am

As firewalls go, I would recommend Comodo Free Firewall. But it does require some knowledge of networking.

TCPView is just monitoring software.
