Thread: [Email RECON 1.2 | The easy way to dox an email | %100 Working](#)

prilux - January 25, 2016, 4:19 am

Email RECON permits a user to dig information about a particular email.
This tool is used to check if an email is registered with a particular service.

what information is it giving you exactly?

Donnie176 - January 27, 2016, 7:37 am

Don't open it... Look at his rep. Trojan no doubt.

You have to see out of the box. The app presents a list of services where you can write any email and know if the email is associated to that service.

This is 100% Clean and it's usefull if you want to gather information for a particular email

pimpin407 - January 28, 2016, 2:33 pm

nice this will come in handy thanks

prilux - February 10, 2016, 3:53 pm

Just a heads up, V1.3 will be available soon!

?Adroit - August 18, 2016, 2:21 pm

Not a trojan. However, its just a compilation of dox tools you can find online :)
