Thread: [New to GFX/photo editing](#)

TheOnlyAnonymous - January 25, 2016, 9:47 am

So guys I am trying to get into GFX and the photo editing stuff since I have looked on here once and have come to the conclusion that all of your work is amazing and that you must have a lot of great tutorials/templates/guides/fonts and more assets that you use to come out with your top quality designs. I am just asking for you guys to share the stuff that you used when you do this stuff.

Regards ~ TheOnlyAnonymous

Google "Amtlib.dll Photoshop CC Crack"

Will give you a nice crack with updates etc. and works also for every adobe software.

Do what singularity said. :)

Go to the official Adobe and download the free Photoshop trial.

Then get a cracked amtlib.dll and drag it into your Photoshop folder.

There are many tutorials online.
