Thread: [\[OpenSource\] Feroxie || WebBrowser || Plugin Support || Fast](#)

AnonCensored - January 25, 2016, 10:23 am

I'm happy to be finally releasing Feroxie a open-source webbrowser

Feroxie use's the [DuckDuckGo](#) Engine (You can change it in the settings If you wish)

It come's with feature's such as

Page Information [Such as Encryption Type/IP Adress of the webpage etc]

Back/Forward/Refresh

Bookmarks/History/Downloads

New Tab (Open as many as you want!)

New Window

Incognito Mode

Find

Change search engine

Change User-Agent

And lastly Plugin Support

Picture's

Plugins

Now let's talk about the plugin support and the whole idea & goal of it.

As shown in picture's above I'll be developing various plugins over time. You can request whatever plugin you like and It'll be made if it meets the criteria. Also you can code plugins your self and send

the code with the Title of the plugin along with a description You can also state If you'd like the plugin to be private or open source as you see a demonstration with the imgur uploader It's set to public so anyone can view it.

As always suggestions & feedback is always appropriated ?

BahNahNah - January 25, 2016, 12:49 pm

This has no plugin support and just uses the WebBrowser control (meaning this is just a re-skin of internet explorer).

AnonCensored - January 25, 2016, 1:25 pm

(Jan 25, 2016 01:49 PM)BahNahNah Wrote: [\[CITE\]](#) This has no plugin support and just uses the WebBrowser control (meaning this is just a re-skin of internet explorer).

The "Plugin" wasn't referring to actual addons from like chrome/firefox extensions for example. It's suppose to have like the same concept but It's going to be developed in the browser It's self if you know what i mean ? Like as i explained above and made a example like the Imgur-Uploader Is a good example of what i meant by the entire "Plugin" Concept eventually there will be tons of addons also I'm planning on making a website and add the plugins there which I'll have to do a bit of tinkering with to get it to work with the browser which I think i'm on the right redirection but yea

If you have to edit the main source of the program to add the feature, its not a plugin. The imgur example you gave is just part of the program, not a plugin.

AnonCensored - January 25, 2016, 1:58 pm

Yea :\ not sure how to do it like that

SIM-1847363 - January 25, 2016, 4:27 pm

I can tell you a noob and that your super cool, so for your efforts, and design i can say this is a great start, nice job.

Pharmacist - January 25, 2016, 6:43 pm

Fucking hell, how is a new programmer going to have the motivation to keep coding with assholes like you?

Good job, keep at it! This is a good project, if you keep at it it'll be great one day.

BahNahNah - January 25, 2016, 6:59 pm

How do expect people to progress if they are never criticized, and instead applauded for everything they do regardless how good it is and how many mistakes are in it?

I prefer criticism and correction when i am learning rather than people being too scared to hurt my

feelings in fear that i might be put off.

taktaktak - January 25, 2016, 7:42 pm

I completely agree, OP by no means are we saying to stop this project, just put more effort into it, there's multiple threads on here and elsewhere that explain how to make a basic plugin system, just takes a little searching.

Pharmacist - January 25, 2016, 10:17 pm

You offered no help with your criticism.

Me personally, when I started If someone would had simply pointed in the right direction It would had gone a lot smoother than it did, instead I spent 2 years off and on learning and not releasing anything because of getting -Rep'd for trying to release anything. (On another forum).

Your comment:

(Jan 25, 2016 01:49 PM)BahNahNah Wrote: [\[CITE\]](#) This has no plugin support and just uses the WebBrowser control (meaning this is just a re-skin of internet explorer).

So he's using the WebBrowser control, why not link him to a bit of documentation on it?

I'm not saying spoon feed him by any means, nor am I disagreeing with your point that a certain amount of criticism is good, but bashing without offering any help or tips? Someone with your skill level should had at least posted a link man.

Of course all this is JUST my opinion, it could be wrong or right, I don't care, it's how I look at it. I don't code anymore, and I never got into anything more than getting through school.

Odus - January 25, 2016, 10:48 pm

Great effort, that progress bar looks like something out of Safari!

I would suggest reworking the plugin system since people sending you their code isn't really a valid plugin, it's like people are contributing to its development. Also consider using a different web framework as this is running on the IE engine.

Oh and post the source on GitHub. It's good for projects like this + you won't be able to edit the thread after 2 days.

Rhez - January 26, 2016, 1:22 am

Great job for the effort buddy.

But I can't see the plugin there. You just put another program there but nothing to do with the webbrowser itself, right?

Program manager is the right name for it.

Check this webbrowser also coded in VB.NET [AirBrowse](#)

AnonCensored - January 26, 2016, 2:09 am

Thank you for your feedback!

and Yes I need to change it to something else like awesomium or gecko

And here's the [github](#) It's not in proper format yet cause idk how to use github need to download the app I think but i'll figure out later today

(Jan 26, 2016 02:22 AM)Rhez Wrote: [\[CITE\]](#) Great job for the effort buddy.

Thats not how you use github xD

Install the visual studio extension and upload it from there.

AnonCensored - January 26, 2016, 2:11 am

Phoenix - January 27, 2016, 3:38 am

nice project try to develop it, may one day it will be like chromium source

Decim - January 27, 2016, 7:26 am

The design looks nice.

Would be great to see some tutorials on how you do your GUIs.

Sc?rf?c3_ - January 27, 2016, 7:37 am

If is one of your first projects is not bad at all. Layout is clean and well designed. But please learn to ALWAYS give proper and descriptive names to your controls. (textbox1, tabcontrol1, and such.)

Better u get some good habits at the beginning.

Kedox - January 27, 2016, 12:30 pm

Does look fantastic. Make sure to leave credits to the theme creators! I look forward to seeing this progress, honestly.

AnonCensored - January 27, 2016, 12:37 pm

(Jan 27, 2016 01:27 PM)Electroalek Wrote: [\[CITE\]](#) Honestly seeing your efforts, bravo for you. I love how you make nice little projects, and make them look cool. It's how ever coder starts, with a web-browser. Keep on learning.

Thanks

Maybe one day but It's quite simple

woahxx - January 27, 2016, 10:37 pm

Very impressive, goodlooking

Just not fan of WebBrowser in VB

AnonCensored - January 28, 2016, 3:44 am

(Jan 27, 2016 11:37 PM)dxel Wrote: [\[CITE\]](#) Very impressive, goodlooking

Yeah me neither lol the only reason i used it was cause Webkit was quite out-dated and had limitations which i didnt like so i didnt use that and gecko seemed perfect but i just couldnt get the xmlrunner to work kept popping an error so i gave up (after 8 hours of trying straight) but I might try again sometime and hopefully succeed lol

ak999 - January 28, 2016, 11:22 pm

It's a good visual basic I like its interface

J_128 - January 29, 2016, 4:08 pm

Great source thanks :D

I like visual basic ;)

thedirtybook - January 30, 2016, 11:04 pm

your project looks good dawgie! Hope it works out well.
