Thread: [NEED GOOD PASSWORD LISTS](#)

protojackedyou - January 28, 2016, 7:56 pm

Does anyone happen to have a really good password list for kali linux? i cant seem to find a good one to bruteforce this email... its a gmail.. Please respond to this with like a skype or a twitter that i can hit you up on or post a link in a reply if you can. Thanks

Donna69111 - January 28, 2016, 8:16 pm

What is a password list? Can someone give an easy explanation?

Heart - January 28, 2016, 8:18 pm

search "password list" using the search bar and you'll find pw lists ranging from 10k password all the way up to 14 million

Just a heads up: Securing a Gmail is relatively difficult. Your ip must be spoofed in a way where Gmail doesn't recognize it as a VPN or Proxy and the ip you use MUST be from the same region as the original creator or recent login IPs. It is very easy to trip one of Gmails many alarms for the account owner, even if you get the login info right it will tell the owner "attempted login from: (YOUR IP, YOUR LOCATION) was prevented"

Have you tried rockyou.txt? It's compressed under /usr/share/wordlists

BlackCypher - January 30, 2016, 10:33 am

I can vouch for crackstation their wordlists. You can find them here:

<https://crackstation.net/buy-crackstation-wordlist-password-cracking-dictionary.htm>

Now these lists are usually too big for some programs, i have encountered some that just threw an error at me saying they don't support files that contain over 500 000 000 words.

I just split the files in a few pieces and it stopped complaining. Now like Intah said, you'll need an IP from the region the email owner is in, this might prove difficult so the best solution to that is looking up their facebook .

you can easily find to what account an email is linked via the 'i forgot my password' and sometimes even by just entering it in facebook their search bar while logged in.
