Thread: [Simple Face Swap Tutorial](#)

Djehuty - January 29, 2016, 12:24 am

I'm back with another quick tutorial. You can find a more detailed version under the tread design. All feedback is appreciated.

Tutorial ([Click to View](#))

More Detailed Tutorial ([Click to View](#)) You'll need 2 images for this, I'll refer to them as BG and face.

1. Open the BG and face in photoshop.
2. Using the pen tool, draw a path around the face.
3. Right click and click Make Selection.
4. Make sure the feather is set to 0 and click okay.
5. Using the marquee tool, right click and select New Layer Via Cut.
6. Delete the rest of the layer, leaving only the face cutout.
7. Lower the opacity. Press CTRL+T and reposition it.
8. Increase the opacity back to 100%
9. Duplicate the layer and hide it.
10. Shift+Right click on the layer thumbnail to make a selection around it.
11. Go to Select>Modify>Contract and contract it by 5-15 pixels.
12. Select the BG layer and delete the selected pixels.
13. CTRL+D to deselect it.
14. Hold CTRL and click both the BG and the face layer. Don't select the hidden one.
15. Go to Edit>Auto Blend Layers.
16. Make sure the mode is Panoramic and Seamless Tones and Colors is selected.
17. You should have a good result now.
18. You can unhide the copy of the face layer and ALT click the layer mask button.
19. Use a soft brush to clean up the eyes and mouth.
