Thread: [\[TUT\] Get an IP without a Link!](#)

YayHar - January 29, 2016, 2:22 pm

So as you know, Microsoft has fixed the issue involving Skype Resolving so it'll be a tad bit harder to get a current IP of a victim. No, this is not dependent on Skype.

Requirements:

Gmail [One that is not important, not connected to anything]

Setup:

Not a lot of setting up here. This is a really simple method, that requires no work at all. Once you have the email setup, just go to the next step.

Execution #1:

You're going to have to come up with something clever, or just not go full retard and make it obvious.

Message the victim on whatever platform you're talking to them on, and tell them that you have Hacked an email and there is Paypal, Facebook, whatever you need to make this person believe you. They might be like "Nope, you're lying."

Good.

Send them the credentials and have them login. Gmail has a security feature that logs all IP's that log into the email.

You will get an email, click on it and go and find the IP.

Execution #2

Here is a way to get them to log in.

You: "Hey I hacked an email"

Person: "No you didn't"

You: "Yes I did!!!!11!"

Person: "Prove it"

You: "Here, check *credentials*"

This is a very very rough chat log, but you get the jist.

DontQQSoMuch - January 29, 2016, 2:24 pm

Well, that's an interesting one you wrote there, thanks :D

SIM-2122005 - January 29, 2016, 2:25 pm

Thanks for sharing, going to try this out!

BlackCypher - January 29, 2016, 2:41 pm

That's a pretty good method you have there, making use of people their greed and curiosity at once, thanks a lot :)

YayHar - January 30, 2016, 9:17 am

I'm glad you guys enjoy this :D

pp4l - January 30, 2016, 9:29 am

works with pastebin too, if someone already knows about gmail

?Criminal - January 30, 2016, 11:01 am

This is common sense and has been known for awhile could of sworn someone else posted the same tutorial works with any site with login history and microsoft didn't entirely fix the IP problem, the resolvers that use the sending file method/call method still work since those connect directly to the person.

tunucef - January 30, 2016, 11:11 am

No need can be removed, thanks.

YayHar - January 30, 2016, 11:43 am

(Jan 30, 2016 12:01 PM)?Criminal Wrote: [\[CITE\]](#) This is common sense and has been known for awhile could of sworn someone else posted the same tutorial works with any site with login history and microsoft didn't entirely fix the IP problem, the resolvers that use the sending file method/call method still work since those connect directly to the person.

This was meant to let others know n the event they didn't already know.

cASTL - January 30, 2016, 2:10 pm

Thanks for sharing. Worked for me!

Niko - January 30, 2016, 6:13 pm

Sounds like it could work pretty good. Thanks for the tutorial.

XeSimplicity - January 30, 2016, 8:06 pm

OR you can be using something else like WhatsTheirIP website and get ur self a private link from them and then use a free method to short the link and then use another free method to change/customize the short link so these two links will redirect the victim to the third link/server and then you'll have their IP.... You'll be able to do what ever with that IP address...

EDIT: Sorry, I didn't see the entire title... "without a link..." OK!

IcyPr0t0c0l - January 31, 2016, 3:41 pm

Simple yet effective. I wonder how you could apply this method because I feel like not a lot of people are going to log into another email. But hey, nice tut ?

scintillating - February 1, 2016, 2:48 am

If anyone is incoherent enough to log into hacked accounts with their own IP they might as well end life.

Ghostbill - February 1, 2016, 7:29 am

Thanks for sharing, going to try this out!

YayHar - February 1, 2016, 1:47 pm

Well, tell me how you really fell ._.

2341Arya1 - April 5, 2016, 11:43 pm

Thanks for sharing, commenting for later use!

YayHar - April 11, 2016, 6:24 am

I would love to get some more feedback on this.

OutlawSnoopy - April 11, 2016, 6:46 am

Sorry, I didn't really get it. What do you have to send exactly ? You own gmail login page ?

Lil Vert Uzi - April 11, 2016, 6:48 am

i think outlook.com also does this

Description - April 11, 2016, 6:59 am

This is an old method anyways thanks!

Vicci - April 11, 2016, 7:32 am

This is the most skid method that I've ever seen.

YayHar - April 11, 2016, 7:34 am

(Apr 11, 2016 07:32 AM)Vicci Wrote: [\[CITE\]](#) This is the most skid method that I've ever seen. How so?

void account - April 11, 2016, 7:36 am

If a person is going to use their real IP to log onto a "hacked gmail account" in order to do malicious things to the original owner's Facebook, or whatever the fuck you tell them, then they're stupid. Most people will use a VPN anyway.

? Soufian ? - April 11, 2016, 7:37 am

It's much easier to let them click on a link instead of this lol

YayHar - April 11, 2016, 7:38 am

(Apr 11, 2016 07:37 AM)? Soufian ? Wrote: [\[CITE\]](#) It's much easier to let them click on a link instead of this lol

In my experience, people are much less timid to login to a Gmail then click on a link.

That's just from my experience.

This method wasn't meant to be a 100% full proof, just an abstract idea to let users fill in the blanks.

Vicci - April 11, 2016, 7:39 am

(Apr 11, 2016 07:34 AM)YayHar Wrote: [\[CITE\]](#) How so?

"omg mate look i just hacked cards and money visit this account and check" ?

YayHar - April 11, 2016, 7:42 am

(Apr 11, 2016 07:39 AM)Vicci Wrote: [\[CITE\]](#) "omg mate look i just hacked cards and money visit this

account and check" ?

I'm positive you can come up with a script to say, it was just to give the idea.

This method wasn't meant to be a 100% full proof, just an abstract idea to let users fill in the blanks. The best way to play this trick might be to pretend that you've accidentally sent them the gmail details.

Yeah here's the acc i was talking about: blabla@gmail.com 123456

- wait 20 seconds -

- remove message -

Damn, wrong person

void account - April 11, 2016, 8:27 am

You can do the same shit with a link.

Yeah here's the website that's giving out amazon giftcards: fuckmehard.com

- wait 20 seconds -

- remove message -

Damn, wrong person

San1ty1 - April 13, 2016, 3:01 am

Never knew that. Thanks for sharing

Tokyo - April 13, 2016, 9:50 pm

Most users that fall for this won't know gmail actually logs ips that fail to login to it. This method is simple but blunt.

The Boogeyman - April 13, 2016, 10:00 pm

Thanks for sharing but I feel the method on sending the target a IP Logging link is a lot better. No one is going to go into someone elses email account, especially if they think you are a hacker. There is also link spoofers now that make the IP Logging method a lot easier to use. So I will stick with the old school method.

yunghollow - April 13, 2016, 10:03 pm

This looks very promising, thanks op for the share.

illuminaughty - April 13, 2016, 10:14 pm

This is retarded.

But for some reason some people still fall for it.

xXxxXsuprmlGh4xorXxxXxxxX - April 14, 2016, 1:18 pm

I've never thought of getting an IP that way, thanks for the idea OP.

Silent Uprising - April 16, 2016, 12:12 pm

Then once they log in they can look at the IP history area in the gmail settings or FB network devices. They see your IP. So just because you get theirs they get yours aswell, worth it? If the person is retarded and logs in then you should change the password and kick-out all other account's who don't make your current IP so it kicks them out of the account(And by now you would of changed the password). I dunno...I'd rather IP log the victim.

Aveling - April 16, 2016, 12:13 pm

This is actually very clever, thank you for sharing!

YayHar - May 11, 2016, 5:52 pm

Glad you like it!

Doughboi - May 29, 2016, 8:11 am

Or you could just get the IP from the e-mail header.

YayHar - June 27, 2016, 5:36 am

(May 29, 2016 08:11 AM)Doughboi Wrote: [\[CITE\]](#) Or you could just get the IP from the e-mail header.
You would have to know their email, if I understand correctly?

tr1ck - June 27, 2016, 7:59 pm

wow thanks, actually pretty useful i guess if you can't find it elsewhere. but if they trust you this much, I believe just calling them on skype and using commview would be a better option? obviously correct me if I'm wrong

TheTwitchTerror - June 27, 2016, 10:33 pm

Who would login to a gmail with hacked bank account logs on there real ip ROFL

Riyu - June 27, 2016, 10:35 pm

(Jun 27, 2016 10:33 PM)TheTwitchTerror Wrote: [\[CITE\]](#) Who would login to a gmail with hacked bank account logs on there real ip ROFL

If you have notihng to contribute to the thread whats the point of bashing it? idgi.

Zexo - June 27, 2016, 10:37 pm

You can also do the same with steam accounts if someone changes the password if you want to add that to the op.

Th3J0ker - June 28, 2016, 10:15 am

Very interestring. Thanks for sharing.

YayHar - July 5, 2016, 8:59 am
