That's a pretty cool tool, thanks for the share. Did you write it yourself? What determines the levels?

Yeah, made it today. I was trying to make it multithreaded with node.js but couldn't be bothered so I was testing out asynchronous methods in js/jq (didn't work out any faster).

PHP Code

```
<?php
if(!$_SERVER['HTTP_X_FORWARDED_FOR'] && !$_SERVER['HTTP_VIA'] && !$_SERVER['HTTP_PROXY_CONNECTION']) {
    echo 'proxylevel_elite';
} elseif(!$_SERVER['HTTP_X_FORWARDED_FOR']) {
    echo 'proxylevel_anonymous';
} else {
    echo 'proxylevel_transparent';
}
```
