Thread: [WIN 10 refresh error?](#)

SIMAAS - February 3, 2016, 4:48 am

It's freaking annoying, I can't work with this.

Can someone help me on how to fix this? ?

(some kind of error shows up, gyazo doesn't capture it.)

Freebooter - February 3, 2016, 9:48 am

Can you write down the error message for us please.

Quote:1st: Download Auto Runs.

Click Here:

<http://download.sysinternals.com/files/Autoruns.zip>

Link basis: <http://technet.microsoft.com/en-us/sysinternals/bb963902.aspx>

2nd: Find the yellow highlighted Image Paths that ends with sysmenu.dll. Usually you can locate those image paths from Scheduled Task.

3rd: Right click then delete.

4th: Try to find all yellow highlighted Image Paths that ends with sysmenu.dll from "Everything tabs, delete them.

NOTE: Carefully choose image paths that ends sysmenu.dll only, if you deleted paths that are not high lightened then it might cause some trouble booting your PC.

5th: Reboot Computer

6th: Wait at least 5 minutes to confirm that the issue has been resolved. (sysmenu.dll usually appears within a minute from rebooting the computer.)
