Some basics tutorials of Metasploit- by Spirit Hello Guys, My name is Spirited wolf and today i am here to share my some nooby tutorial's of Metasploit ?

So, first thing is what is Metasploit?

->So, my answer will be Metasploit Framework is a open source penetration tool used for developing and executing exploit code against a remote target machine it, Metasploit frame work has the world's largest database of public, tested exploits. In simple words, Metasploit can be used to test the Vulnerability of computer systems in order to protect them and on the other hand it can also be used to break into remote systems.

Its a powerful tool used for penetration testing. Learning to work with metasploit needs a lot of efforts and time. Ofcourse to can learn metasploit overnight, it needs lots of practice and patience.

So, here you go the :drinks: Cheerz...

Good work, in the first vid i think you needed to bring the payload in the xp machine in some other way because in a real scenario we cannot just drag the payload onto his desktop ;)
