Thread: [\[Objective-C\] initWithModel method](#)

Ruby On Rails - February 5, 2016, 11:19 am

I'm trying to create an initWithModel method that uses a NSString *model as an input.
I can't seem to figure out how to create an initWithModel method, any ideas?

Annabelle Lee - February 5, 2016, 11:31 am

So if I understood this right, like this?

Code - (id)initWithModel:(NSString *)oneModel; //constructor
Or did you mean actual function itself?

initWithModel isn't recognizing as anything, it's thinking I'm naming the method initWithModel.

Do you think you could post a piece of code that reproduces the behavior?
