Thread: [Panda Global Protection 2016 5 Devices Multi Year License \(As long as you want\)](#)

**Anissobest** - February 6, 2016, 5:27 am

This is a TP-Link promo for Panda Global Protection which supports up to 5 devices including Windows, Mac, iOS and Android. Due to a loophole the 6 month promo code can be used multiple times on a single account meaning you can activate the program for as long as you like. Whether you want 1, 2, 3 or more years is up to you.

Panda Global Protection Features:

<http://www.pandasecurity.com/uk/homeusers/>

How to get a multi year license:

- 1) Create a new account at Panda using a legit email address. Verify the account from received email (skip the name/address page).
- 2) Download Global Protection 2016 trial and install (watch for the adware). Open the program and it'll activate for 30 days (use any fake email if it asks for one to activate the 30 days).  
<http://acs.pandasoftware.com/Panda2016/GP/181166/PANDAGP16.exe>
- 3) Click My Products in the main window (bottom left), click "I have an activation code" at the bottom and enter the code:  
GP15TPLINK56
- 4) Enter email and password from your account when asked. Activation should be successful and you'll have 180 days.
- 5) This is important; WAIT A COUPLE OF MINUTES and repeat step 3 to get another 6 months added to your account. Entering the code too soon will revert it back to 6 months again so wait at least a few minutes between tries.

Repeat step 3 however many times you want to boost your license. Once logged into the Panda software you only have to keep entering the promo code every few minutes.

A 1 year Panda Global Protection 5 device license is currently a hefty £69.99 at their website.

**\*\*Alternate method\*\***

This way is the reverse of above and will let you get the license length first before creating an account:

Don't create an account yet, download and install Panda, then use the promo code as many times as you want (while leaving 2 or 3 minute gaps). Each time it asks for an email choose select account later.

When you get to the license period you want, click go to my account and enter an email which isn't tied to a Panda account. Then go through the account setup phase. When that's done your account will show the license period you got up to with the promo code.

This seems to be a safer method and shouldn't cause so many issues, I've had 100% success with it so far.

In fact you don't need to create an account at all but can keep using Panda with the extended license, but it does mean you can't reuse it in the case of reinstall.

In terms of protection and detection rates, it is very good and often up the top among the likes of Bitdefender and Kaspersky in testing lab results.Â
