Thread: [\[PPI\] Simple tutorial on how to use PPI along with your RAT slaves/bots to make \\$\\$\\$](#)

Deathiant - February 7, 2016, 4:51 am

Aight well since I seem to have some negative reputation due to PayPal fucking up my account and screwing over one of my purchases, I decided I would make this guide and release it to the HF community to hopefully fix that and help a few people out on the way.

So basically I am going to put this in simple steps, of how to use PPI services along with your rat slaves to make some \$\$\$.

Recommended websites/services to use:<http://cinstaller.com/> [one of the few services which can pay out in Bitcoin]

<http://www.perinstallcash.com/>

www.revenyou.com

All of these services should be suitable for your slaves, and using all of them together allows you to make the most you can out of every single slave. Do remember that you can install only once per slave, and if you can acquire US based slaves that is better as there is a higher pay rate for the US.

Step 1:

Make your accounts and await approval.

Step 2:

Get your download links as well as installers and organize them all into one folder and Zip it to be able to easily transfer it to your bots.

Step 3:

Using any Rat software with a hidden vnc or RDP feature connect to your slaves, and manually shift through each of them in order of geographical importance. US slaves first and lower paying countries after them, to make the most out of the services.

Step 4:

Most services take 5-10 minutes to update their stats or register the install, so don't worry if it doesn't show up immediately. Also make sure you remove the PPI software after it has been registered by a while, 15-20 minutes generally is a good time, so that your slaves do not notice it and become aware that they are infected. An FUD crypter is key here.

Step 5:

Profit?!?!?!?

Warning: Do not start off your account with hundreds or thousands of installs, better to maintain a steady flow of installs coming in to your account so as to not draw any suspicion. Also some services might not be able to count every install if a large number of them happen quickly in a short period of time, causing you to lose out. Just maintain a sensible income of installs.

There are many services and websites which would work better for this, and some who might offer bigger payouts or better rates but require you to apply and wait to be approved or are more strenuous in their reviewing process. Its up to you to look for them, I am only posting this to point newer members to this method, as I remember I could have benefited greatly from a guide such as

this when I started looking for methods to monetize my slaves, and I think this might help some people out. If anybody would like to ask me more about this or needs help in general they only need to PM me, and I will try and answer any questions I can. Or reply below.

James Burnham - February 12, 2016, 7:08 am

Sounds good. Thanks for this tutorial.

Yoko_ - February 14, 2016, 12:26 pm

Seems like an easy way to make a little money, about how much can you make with this method? I'm talking keeping the installs to just a few a day to not get banned

Deathiant - February 15, 2016, 4:17 am

well, using US slaves, some pay as much as \$1 or 2 per install, the way I did it was buy 100 bots from any of the shops on HF, ask for a few american slaves, then go through and install the software on them. Out of the 100 installs, 23 were american, 22 of them stayed long enough to get counted, so that is already \$22, and it cost me \$5 to buy the 100 installs in the first place

SIM-2908357 - February 15, 2016, 11:15 am

How do you actually get the bots to install the software?
Do you do it through remote desktop? o.O?

Ronaldo. - February 15, 2016, 11:32 am

Good tutorial OP I will try it soon.

dimi1810 - February 15, 2016, 3:00 pm

Yeah I was thinking the same question of Akzius.
Do you do it trough remote desktop? And what is your Rat?

Ju1c3b0x - February 15, 2016, 3:07 pm

I wonder if mining the same number of slaves would be more profitable. Anyone know?

TheSocomj - February 15, 2016, 3:16 pm

No mining wouldn't be as profitable since when you mine the slaves get detected faster!

Deathiant - February 16, 2016, 4:47 am

I use Luminosity Link and the hidden remote desktop feature, so I can install without the bot realising it. As for mining, it is nowhere near profitable, and to make any sort of cash you would need thousands upon thousands of slaves and you would have to hope they dont notice ur usage of their cpu

PizzaBros. - February 16, 2016, 10:58 am

thanks for sharing mate, Blackhat blackhat blackhat but maybe some day I'll turn to that dark side :X

Lexus™ - February 16, 2016, 11:59 am

thanks for this thread mate, will try these and see

The Defiant One - February 17, 2016, 1:53 am

Interesting tutorial. Thanks for sharing!

Deathiant - February 17, 2016, 7:56 am

Thanks Guys! Glad I could be of some help to all of you guys!
