Thread: [Python MD5 Cracker](#)

emadaldin1 - February 7, 2016, 5:54 am

This is very simple code I wrote in python

I started last night and had so many errors

most of it was the result of

Code IndentationError: expected an indented blockpython will give you this error if you even forget to add or remove space and I did get help from here too :D

just thought I can share it here with you guys

Code import hashlib

def md5hash(data):

 a = ""

 m = hashlib.md5()

 m.update(data)

 a = m.hexdigest()

 return a

try:

 with open('worldlist.txt') as file:

 pass

except IOError as e:

 print "Unable to find file worldlist.txt"

 exit()

link = raw_input("enter hash name :")

with open("worldlist.txt") as f:

 for line in f:

 text = line.rstrip()

 md5hash(text)

 if link == md5hash(text):

 print("pass: {}, hash: {}".format(text, link))

 break

 else:

 print md5hash(text)

 print("Does not match.")

how to use
go to Code <https://hashkiller.co.uk/downloads.aspx>you can download any of these wordlist from the site

Code Wordlists: HashKiller Passwords [114MB] Updated daily

 HashKiller Output Wordlist [144MB / 511MB]

 human0id - Passwords, Security and Other Stuff

 PsyncOPackv2 [1.4GB / 5.36GB]now make sure before you run the file

to rename the wordlist to

Code worldlist.txtsecond run the project

paste your md5 code that you have

and if the project cracked the hash from the world list file

then it will show you something like this

Code pass: userlogin.%EXT%, hash: 8b952b51f41b730446faad05c200fea8enjoy

I'm not being rude but if you struggled so much with that simple error then I doubt you coded this and you probably copied and pasted it from somewhere.

ouch that did hurt 0_0 lol

such pain to work hard :(

and then someone tell you that you copied and pasted it from somewhere

Nope 0_0

man I struggled with that error and other errors too and there no shame admitting it since this is my second project in python

but thanks anyway 0_0

I'm not being rude but you are rude 0_0

If its your second project then that's impressive. Nice

emadaldin1 - February 7, 2016, 8:38 am

Thanks you very much

but I'm still new and I think this code is very simple

well I would really like to hear some comments about the project

and if it equires a lot of more work

what can be made better or etc

let me hear your opinions :D

thanks
