Thread: [Orcus Remote Administrator](#)

Armada - February 7, 2016, 11:39 am

Its almost ready..... ?

I post here to gauge what the community thinks a piece of software like this is worth.
Before we start with the generic thread, I want to point, out, this is multi OS supportive. Meaning the Base Install Binary is a Win32 executable, - only target windows terminals.
The server and controllers are flexible.
Server can run binary windows, or unix based shells, the Admin controller, baseline is again Windows based framework, NET architecture.

We are expanding to include the Droid interface without streamline issues as well, by launch it should be refined as well.

So, I ask you community.
Whats the product worth?

Binary Ghoul - February 7, 2016, 11:40 am

I new something like this was coming, your like the most active on the rat section :p
I think it would be worth 20\$

Indecisive enough - February 7, 2016, 11:41 am

Black shades ideal price was 50\$, and they tested a lot of prices. But this was years a go. And it was the best at the time.

HitSweMan - February 7, 2016, 11:41 am

Jeez. Posted right now. Do you have the features that all other corrent RAT have?

Orgy - February 7, 2016, 11:43 am

wow are people still doing RATs?

Armada - February 7, 2016, 11:43 am

(Feb 7, 2016 12:41 PM)indecisveenough Wrote: [\[CITE\]](#) Black shades ideal price was 50\$, and they tested a lot of prices. But this was years ago. And it was the best at the time.
\$50 was initial market thought.

There is however some considerations to give.

Especially server distribution.

Orcus does not utilize server in command/interface console design, we separated, meaning you can deploy your command and control servers vastly, holding a virtual no limit amount of machines.

Meaning this can create a bot network, as per definition.

Indecisive enough - February 7, 2016, 11:44 am

(Feb 7, 2016 12:43 PM)Orgy Wrote: [\[CITE\]](#) wow are people still doing RATs?
My initial reaction, pretty crazy to still see them.

Kinguin - February 7, 2016, 11:46 am

You should make an Rat that's the cheapest on HF, which will get you lot's of sales, but for a cheaper price.

I'd price it at \$9.99, atleast I'd do that if I was selling it.

Or even \$14.99

Indecisive enough - February 7, 2016, 11:47 am

(Feb 7, 2016 12:43 PM)Armada Wrote: [\[CITE\]](#) \$50 was initial market thought.

If your trying to say you can charge more then 50, I doubt it'll sell as well.

Armada - February 7, 2016, 11:50 am

(Feb 7, 2016 12:46 PM)Kinguin Wrote: [\[CITE\]](#) You should make an Rat that's the cheapest on HF, which will get you lot's of sales, but for a cheaper price.

I'd price it at \$9.99, atleast I'd do that if I was selling it.

Or even \$14.99- Not for my developers efforts, it would be an insult to him.

(Feb 7, 2016 12:47 PM)indecisveenough Wrote: [\[CITE\]](#) If your trying to say you can charge more then 50, I doubt it'll sell as well.

Im not looking to over price, I am thinking what is fair, given what is being offered.

I HONESTLY would not pay more than \$100 Myself.

That being said, I am thinking the area of \$50-75 per license.

This is also a multi license system, meaning the same licence code can run on X amount of machines as per our definition, I am thinking of a 3x machine price break as well.

stackoverflowin - February 7, 2016, 11:55 am

Quote: or unix based shells

No, no it's not. Unless you've compiled this for Mono, you have no idea what you're talking about.

Quote:is multi OS supportive

Read above

Quote:NET architecture

.NET isn't architecture, it's a framework. If you want to talk about it in this way talk about the virtual machine (CLR). You don't have any idea what you're talking about, do you?

Quote:Server can run binary windows

Ok, this doesn't make any sense at all.

Quote: Base Install Binary is a Win32 executable

What..? So it's a PE, ok. Just like every single other fucking executable in the world.

-

Please don't release something you have no idea about OP ?

It looks like to me you've bundled a load of fancy words together (which don't even make sense) to make your .NET skidware look advanced.

Have fun releasing this, hopefully no one will crack it :)

Report this as sales trashing if you wish, but I'm only giving my honest opinion on the matter and pointing out where you've phrased things wrong :)

Armada - February 7, 2016, 12:10 pm

This was not a technical thread, nor intended to be.

I am aware within the community we are going to question the technicals of such software, I do so daily myself. So no disregard on you doing so as well. Much respect for the constant question and viable feedback.

However, again, I am in process of production, this is a multi OS supported system, to many degrees, no its not universal, and that will be CLEARLY marketed.

Theres no hidden aspects here, I wanted some community input, thats all.

Feel free to continue such input as well.

I intend on making this well worth while to anyone who invests in a license.

stackoverflowin - February 7, 2016, 12:49 pm

Your autistic, I swear, what are you missing about this?

The central controller is Windows x86 binary, YES.

The Server, command and control is multi, it can run on linux/unix OR windows.

Again the binary install file is windows x86 again so it is restricted to windows machines.

stackoverflowin - February 7, 2016, 1:04 pm

As part of our shared group membership you are already open to the Beta, PM me for a copy and a key, I am sure after testing your opinion will change.

Sorzus - February 7, 2016, 2:49 pm

Hello, I'm Sorzus, the developer of Orcus. Me and Armada, we are partners and work together: He does the marketing and I'm the programmer.

Don't be so rude with him, I'm the programmer of this tool and I know everything about it and I will answer all your questions about this program.

One thing to say: This tool are 3 applications: The controller, the server and the client. The client is just for Windows (XP-10). There are two versions of the server: One with a GUI for Windows and one with a CLI which is mono compatible (so it runs fine on linux system). The controller is a Windows application and we have an Android app.

StackOverlowin Wrote:Quote:

Look above, you don't even have to compile it for mono, it just runs with mono ;)

Tx707 Wrote:I'm sorry but it looks like a teenager made it. It looks unprofessional.
You definitely need to talk to a graphics designer and look for someone that knows how to make GDI's.
Actually you are correct, I'm still teenager. Yes, I also don't like the dark theme very much, the light theme looks better, but I think that some people might prefer it.

StackOverlowin Wrote:What you just said makes no sense at all.

Please compile for x64 as who the fuck uses x86 shit?
Actually, Armada is correct. The platform target of this application isn't "Any CPU" but x86. The reason is that it loads 32 bit native dll, but it actually makes not a different because "Prefer 32-bit" is checked by default anyway.

Binary Ghoul Wrote:Since its multi os it uses java right?
Look above, not the client but the server and controller can be used on different operating systems.

Feel free to ask me any questions about the programming stuff which came up to your mind ;)

Cammy - February 7, 2016, 3:16 pm

Can we please skip the technical mumbo jumbo and get to the point where you tell us why we should buy this RAT instead of all the others there

And fix the interface it looks awful.

Armada - February 7, 2016, 3:20 pm

This is defined by the placement of your C&C services, we recommend a cap of 10,000 maximum per Orcus Server, this means every 10k clients, we recommend you establish another server.

Controllers can establish an unlimited number of servers.

This god honest is the feed back I have been looking for.
Thank you for the constructive criticism.?

Binary Ghoul - February 7, 2016, 3:48 pm

If you can add enough features to be able to compare to LL i think this could become the new best rat on hf simply because if the multiple server thing actually lets you have near infinite clients just by making a new server every 10,000 clients it would be very unique and the only rat that can support that much.

Edit: Also i think i would buy this if it was 30\$

Armada - February 7, 2016, 4:18 pm

(Feb 7, 2016 04:48 PM)Binary Ghoul Wrote: [\[CITE\]](#) If you can add enough features to be able to compare to LL i think this could become the new best rat on hf simply because if the multiple server thing actually lets you have near infinite clients just by making a new server every 10,000 clients it would be very unique and the only rat that can support that much.

I have a direct agreement with Maxxor/developer for use of that single specific function, thanks for noticing. ?

Grim - February 7, 2016, 4:43 pm

I think a good RAT should sell for \$50-75

Wardow - February 7, 2016, 4:43 pm

(Feb 7, 2016 05:40 PM)Armada Wrote: [\[CITE\]](#) I have a direct agreement with Maxxor/developer for use of that single specific function, thanks for noticing. ?

Even with his agreement, selling public code is a rip off, coding remote administration tools in languages that depends on the .NET Framework doesnt compete much these times, and anyway any feature you will make will not attract much customers the only things that attract customers are very illegal features which are not allowed on Hackforums.

Grim - February 7, 2016, 4:43 pm

Firstly, your wrong, we went with a function that works, why would I have Developer bust his ass unnecessarily for a function that already works perfectly fine?

There is no reason, so it wont be focused on, maybe later, but we can improve on other functions, FIRST.

Again, I dont normally BACK products often, I am on this because I see the developers hard work, he has been totally candid with me and I believe in the product itself.

Haters gonna hate, I suppose.

You cant compare the product to others yet, only the Beta testers can, and I assure you, they will say what I am.

deiski - February 7, 2016, 5:15 pm

I highly recommend anyone interested in this product to stay clear.

OP seems to be throwing around countless terms without even any knowledge of his product(s).

Armada - February 7, 2016, 5:25 pm

Allow the core developer to answer then.

SIM-2908357 - February 7, 2016, 6:06 pm

Sorry Armada, I respect you and your contributions, but I don't see this selling for the price you have in mind.

It looks like a simple RAT, not well organized (imo), and frankly just something I don't see myself using.

Luminosity has a good theme, looks professional, clean, works well, and lives up to the hype.

This RAT just looks so basic, boring, uninteresting, and doesn't grab my attention.

When I look at you RAT I should be thinking, ooh, this could be a good competitor for Luminosity. Instead I'm thinking this could be a good competitor for:

<https://hackforums.net/showthread.php?tid=5160062>

Anyways, I really recommend that you re-think the design, make it more user-friendly, clean it up with a refreshing theme, and add some REAL unique features.

These features could be: Reverse Proxy, Skype-Viewer & Skype Auto-Spreader, Hidden RDP, Social Media-Spreader, etc.

How I see it now, this won't sell for anything more than \$25.00.

Not trying to be rude with this post, just wanted to provide you with real critique.

Armada - February 7, 2016, 6:21 pm

I take no offence. This is the feed back I have been looking for to be honest.

Thank you. ?

Orgy - February 7, 2016, 7:09 pm

(Feb 7, 2016 05:51 PM)Armada Wrote: [\[CITE\]](#) Firstly, your wrong, we went with a function that works, why would I have Developer bust his ass unnecessarily for a function that already works perfectly fine?

There is no reason, so it wont be focused on, maybe later, but we can improve on other functions, FIRST.

Again, I dont normally BACK products often, I am on this because I see the developers hard work, he has been totally candid with me and I believe in the product itself.

Haters gonna hate, I suppose.

You cant compare the product to others yet, only the Beta testers can, and I assure you, they will say what I am.

I was going to say pretty much this. If there's something already coded and the guy's got permission from the author to use it, I really don't see an issue. In fact, one might even argue that using the .NET framework is pretty much the same thing.

zlz the og - February 7, 2016, 7:10 pm

I like this picture of me

Nex+ - February 7, 2016, 8:03 pm

(Feb 7, 2016 05:45 PM)Nexus™ ?? Wrote: [\[CITE\]](#) And by "your product" you mean something you paid somebody to re-theme?

Actually you are the one who just "rethemed" my product. Also, to your question that is a no, the user debug coded it from scratch :)

officialgxc - February 7, 2016, 8:36 pm

I would pay no more than 15\$ for this. The GUI looks like a cliché of most rats that you see on HF, and the functions are really bland, if it came with a Harvard Database I am willing to throw some change. But I think I will stick with Luminosity and Nanocore.

Also a tip, I recommend you let your coder do all the talking, so people can get an idea on what they're getting.

Indecisive enough - February 7, 2016, 9:35 pm

tbh, you don't want this to get big anyway. Look where Alex Yucel is.

deiski - February 8, 2016, 4:08 am

(Feb 7, 2016 06:25 PM)Armada Wrote: [\[CITE\]](#) Allow the core developer to answer then.

Then why are you the one trying to throw out fancy terms and answer questions when you're not the core developer, but when you get put in a spot that someone calls you out, THEN the core developer has to answer them?

Nice start.

Rhez - February 8, 2016, 7:00 am

I don't think this would be as successful as the other RAT like NanoCore, LuminosityLink, and ImminentMonitor ?

The only features that makes me amazed was it can handle a ton of clients. Well I hope you're not lying.

I also read the whole reply on this thread and it seems like you got some problem on explaining your own products.

Tell your Core Developer to be always there to help you.

About the UI?

No offense buddy, but it sucks.

About the price?

Below \$20

About the Plugin

Will you allow some devs to create the plugin for Orcus?

This is just my opinion on what I see and read here on this thread.

Good luck, buddy ?

TheUnknownPlague - February 8, 2016, 7:04 am

The hype is real and sorry if someone already asked this but will independent devs be able to create plugins ?

Sorzus - February 8, 2016, 11:20 am

@TheUnknownPlague

Yes, of course everybody will be able to write his own plugins in VB.Net or C#. We will provide tutorials for creating different types of plugins. Then, they just have to be placed in the /Plugins folder. The plugin manager is just a tool to download & update registered plugins, if you created a good plugin you can write us a message and we'll add your plugin to our plugin downloader (but you are not forced to do this).

McDolands - February 8, 2016, 11:47 am

Well luminosity link is \$40 so u can get \$50 max, also you should consider adding a crypto mining option

Bluffer - February 8, 2016, 11:59 am

After reading your thread I'd say because you are open about what you are selling and because you are willing to listen and implement recommendations that this would definitely be successful if it was built properly. I'd say you could sell it for around \$50.00 without issue.

TheUnknownPlague - February 8, 2016, 12:09 pm

edit yay my 1000th post?

That might be true, but it also has a lot to do with how the RAT is developed.

You want to make money off of it? And you want the coder's hard work to be respected? Here is an idea, develop a legitimate RAT and market it online. They go for \$200+

Orgy - February 8, 2016, 12:46 pm

The TOS is a weird hack forums thing. They either incorrectly assume it will protect them or something else. Just because they make a TOS doesn't mean it's legal lol

Orgy is absolutely right. You can't just come up with whatever TOS you want. It is a lot more complex then people on here think. There is a reason to why organizations hire lawyers to write their TOS/TOU.

Just because you specify something in your TOS it won't protect you against the law.

Armada - March 17, 2016, 5:00 pm

PRODUCT UPDATE

Orcus Remote Administrator has been slated for release April 1 2016

?

Armada - March 17, 2016, 5:57 pm
