Thread: [Is it possible to hack someones instagram account](#)

nemo118 - February 9, 2016, 10:01 pm

Hello

is there anyway one could hack into an instagram account? i really need help. Please teach me. :'(

Cenu - February 10, 2016, 2:34 am

First of all when youre in a new forum: USE THE SEARCH FUNCTION

Chopped - February 10, 2016, 2:35 am

Neck yourself, you clearly don't know.

DingusMonster - February 10, 2016, 4:11 am

Yes, easiest way it to grab their passwords if they have then saved on their computer by ratting. Else, you could just find an ios or Android rat (yes they exist) and spread, then grab ig login info from there

Dr.Penguin - February 10, 2016, 4:15 am

Sure thing man, I can help you out!

Firstly we will need to stop Microsoft from logging everything on our computer.

To do this please go to:

Code C:\Windows\system32

The final step:

Spoiler [\(Click to View\)](#)

.

[spoiler]

Try to use Google maybe, I don't know I'm not a computer expert.

[/spoiler]

Guess I need to learn how to set up a rat n thrn spread it could u post a link where I could learn from?

Death2gum - March 24, 2016, 5:23 pm

You could search for a phishing site (ripped Instagram login site) . Buy or search a nice domain. And now you need to redirect your victim to your Phishing site.

is there anyway one could hack into an instagram account? i really need help. Please teach me. :(Bruteforcing.

If you know the username/email: get a password list, create/find a Instagram bruteforce script and go for it.

There are MANY methods. Too lazy to type all of them down. Bruteforcing wasn't mentioned so.

?hoenix - March 24, 2016, 7:16 pm

Yes, there are multiple ways of hijacking an Instagram account. Different methods are meant for different purposes.

For example, if you have a specific target in mind then you can try bruteforcing their account using different types of software. If you're unfamiliar with what bruteforcing is then to put it simply this method targets an account and attempts to login to the account using thousands of different possible combinations for passwords from different connections until you're successful. Now this method is useful but often unsuccessful as it uses common words and phrases for passwords so if your target has a password that's even remotely strong or complex then you're unlikely to get into the account.

Another possible way is hunting for their password in leaked databases. Although not many people possess databases they aren't that hard to get your hands on, it'd be against the rules for me to provide you a link directly to them but if you search around the internet for them I'm sure you'd come across quite a few. If you don't feel like downloading a bunch of databases then you can purchase an account on a website called [LeakedSource](#) which already contains hundreds of public databases and you can simply search their username on there although you're not always guaranteed to get results.

You can also try to target your victim's system and install a virus or a R.A.T on their computer and attempt to download saved passwords or monitor their computer and keylog their system so that you'll receive logs of every key they type until you find the password that they use to login to their account.

If you have any other questions or need further assistance feel free to send me a private message but before you do please note that I'll only assist you, that doesn't mean I'll hijack the account for you.

thank u for ur reply i've never done any hacking unless i see someone do it i can't learn... :(i don't think bruteforce will work

13795847 - April 24, 2016, 12:23 pm

Rat, phish, and bruteforce are the simplest methods.

I have multiple databases that can be used to grep strings from if needed,
Good luck.

thedaklee - April 24, 2016, 12:32 pm

Hello , first create one notepad and write %251%[2% and save it as hack.exe

Then go to My computer/ C / system32 and delete system32 then you are done! Thank me later
