Thread: [Simple Internet Connection Checker](#)

Motioncity13 - February 11, 2016, 9:49 am

Sometimes people have DNS issues where they don't really know if they're connected to the internet or not; and I wrote this purely out of boredom in two minutes.

```
Code @echo off
title Check Internet Status
:A
ping google.com -l 100 -n 1 >nul
if "%errorlevel%"=="0" (
goto chkS ) ELSE (
color 0c
echo Internet Connection: Non-Existent.
timeout /nobreak /t 1 >nul
cls
goto A)
:chkS
cls
color 0a
echo Internet Connection: Existent!
pause
```

I'm also bored. Here's my version:

```
Code @echo off
color a
::simple code that tries to determine the connection state by pinging a reliable domain like Google.
set mode=does not exist
title Simple Connection Checker
echo Determining Internet connection state...
ping www.google.com -n 5 >nul
if "%errorlevel%"=="0" set mode=exists
title Simple Connection Checker: Internet connection %mode%
pause
```

SavageAF - February 11, 2016, 10:26 am

Or just open cmd and type ping google.com

Here is my version I wrote last year some time.

<https://hackforums.net/showthread.php?tid=4479308>

I actually recently rewrote this in java to make it work better/easier.

This isn't batch so I'm hiding it here ([Click to View](#))
