Thread: [Autoclicker Safe? Random intervals, random location, mouse recording?](#)

McFunny - February 12, 2016, 12:38 pm

Hello

I would like to know how safe would this be:

Autoclicker, with random intervals and random click location in given area.
Watching it full time so if anyone talks to you, you can legit talk with them.

Or is maybe mouse recording for few hours, then running it even better?

If you think they can still catch me, please tell me why.

I don't know how would they know since everything would be random ?

THX in advance ?

The Plague Doctor - February 12, 2016, 12:40 pm

Yes, botting is never safe. It'll decrease the chances using this, yes. But it's still NOT safe.

Also there's like 10 of these threads weekly lol.

I know, but I would like to know how would they know I use autoclicker?

Intervals are random and location would be random as well :/

I have no idea and nobody outside of Jagex can give you a 100% answer to that.

I have autoclicked from 55 to 94 and I haven't gotten a ban yet.

6 hours a night, completely afk.

Did you use random click locations and intervals?

Or did you use mouse recorder?

Sakamoto - February 12, 2016, 2:07 pm

Mouse clickers and automations scripts aren't allowed.

I know they are not allowed...

I'm just asking which way would be the less risky.

Golden Virginia - February 13, 2016, 7:29 am

Better off using mousekeys and have it set to a letter that you just keep clicking (alching that is) makes it alot easier..
