Don't upload child porn, copyrighted stuff etc.
It's fine to upload your rats and stuff, but put them in a .zip or .rar as I don't allow .exe to be uploaded.
Enjoy :)

Jallu - February 14, 2016, 3:39 am

Registered and tested some stuff for him.
Really nice and fast service, will use in future. :)

Miniature - February 14, 2016, 10:45 am

You niggas don't like filehosting???

Chubs™ aka badman - February 14, 2016, 10:48 am

Just registered up. I shall see if this is worth it.

Miniature - February 15, 2016, 4:29 am

Check it out guys, it's 50GB for free Lifetime! :D

SZPZ - February 15, 2016, 2:13 pm

Love the new sauce mini. Better than ketchup any day.

Jokes the new source is sexy babes.

Maxjimme - February 15, 2016, 11:47 pm

registered n testing looks fast speed

Miniature - February 16, 2016, 8:57 am

Check it out guys, updated the site with a new source :)

Jaex - February 18, 2016, 4:53 am

ShareX have built in Pomf support but still people using custom uploader, I don't understand why.
Not to mention even this custom uploader script is very outdated and using regex parsing instead of json parsing.

Hi! I choose this script because it was easy to set up and easy to use. I don't know if you're the

owner or just an developer for ShareX or neither, but thanks for commenting anyways :)

How script can be easier to set up than selecting your site from pomf list? Unless your objective was people to not know you are using pomf.

You may want to filter certain files from being read in the image directory...

I left a note on the site ?

Lol nice one mate ?

paramsiddharth - February 25, 2016, 4:12 am

Nice one. I saw it. Does it allow files to be uploaded without registration? Why does it not allow .EXE files to be uploaded?

Yes, you cannot make an account.

.EXE is not allowed because of abuse.

Saint - February 25, 2016, 7:51 am

Pretty nice, i'll be using it sometimes.

ItsOffshore - March 25, 2016, 8:18 am

Really cool! Why not allow php or html?

```
Just do
<FilesMatch "\.(php|html|htm.+)$">
  ForceType text/plain
</FilesMatch>
```

and

```
<FilesMatch \.php$>
  SetHandler None
</FilesMatch>
```

in your .htaccess in the /files dir

(have not tested!)

it's pretty shocking that you didn't disable php execution. why should people trust your host over other, longer standing pomf clones?

I have no excuse, I basically fucked up. I got a really good coder to patch all of the bugs and stupid things I haven't done myself. It should be bulletproof.

All requests the last month: <https://minifiles.net/files/pxdiblw.png>

Bandwidth the last month: <https://minifiles.net/files/krehamt.png>

Unique visitors the last month: <https://minifiles.net/files/onthrns.png>

Currently there is about 5000 files hosted on minifiles, so as you can see it's easily managable :)

NuckingFutz™ - March 6, 2018, 1:11 am

I needed these types of sites a lot back in the day and I wouldn't have used yours simply because the file size limit is too low. Not flaming or anything just saying maybe others might feel the same way. After all I can send 25mb files on gmail etc. so the additional 75 window is small to say the least. Had it been 1 - 10gb then sure.

Ofc if this is to be used for something illegal that I'm not thinking about then maybe I'm just missing the point.

Geatzo - March 6, 2018, 12:41 pm
