So you have only a 10% chance of winning only 8x your money back? No offense but where is the fun? It's just gambling with horrible odds for the player at this point :L

Only 8x? You make 800% of your initial investment per win?

Yeah, 8x meaning 8 times your investment (800%).

Statistically, you will win this game 1/10 times you play yet only receive 800% of your investment when a true 50/50 game for the player would give you 1000% of your investment. Obviously no gambling could work this way because there would be no profit for the owner, but even in a casino the house takes low odds (1-5%), not 20%. 20% is huge

Could you perhaps link to a site where there are 50/50 odds and you gain 10x your investment?
