Five hundred words is not much.

There are files with several Gigabytes on HF.

Also: The words are not even split, how is one supposed to use it?

There splitted on my end. Dont know why, but the reason I uploaded this was because there 500 most used wifi passwords. 1 gygabyte of passwords will take you a long time if your doing dictionary attacks. So I put the most 500 most used passwords. Not being a dick here but read title man.
