Thread: [Renegade | coding & cryptography group | Skype Group](#)

Dj Sharp - February 16, 2016, 7:07 pm

Welcome,

Looking to start a group based around programming, sharing knowledge, and working on large scale projects for the group. I would like to keep it as small as possible as coding with a large group is a pain and i simply do not have enough whiskey to get me through that. However anyone interested in learning more about programming or cryptography feel free to PM me and I will happily share what I know.

To join just reply with:

Preferred name/nickname:

Years experience in programming:

Years experience in cryptography:

[below are optional]

Preferred whiskey country of origin (Spelling is whisky will cause me to dislike you):

Short intro about yourself:

Heres my attempt at the above;

Preferred name/nickname: Vintage or Vint

Years experience in programming: 4

Years experience in cryptography: 4

[below are optional]

Preferred whiskey country of origin (Spelling is whisky will cause me to dislike you): Ireland, brand has to be tullymore dew.

Short intro about yourself: Got into programming/cryptography when working with xbox360 rehashing and signing. From here moved onto author and co-author a few different mod tools for the xbox. Got interested in PC security soon after and spend most of my time these days either in college or programming and reading about hashsums and algorithms. Love to party, Love liverpool, love football in general, fairly nice guy but can be aggressive, also part-time youth leader. Anyone wanting to learn anything about cryptography or programming just give me a shout. Anyone wanting to get into this group reply below. Hope youre having a good day and look forward to getting to know a few of you.

Anyone looking to hire a programmer, if youre willing to release opensource/[if its a good cause] i may work on your idea free of charge if i like the cause behind it

Note: Currently working out a few kinks with a server (VPS.net are shiteeeee) but once its sorted group will be using a custom built messenger

WOLGA - February 16, 2016, 9:16 pm

Do you have any projects you are currently working on, or planning to?

Dj Sharp - February 17, 2016, 10:47 am

Currently working on creating a secure folder using a virtual drive and access control to prevent applications from reading it before it's saved, when saving the drive saving it as a single compressed, encrypted and signed to ensure privacy.

Also working on a few library's for application protection , ie using dynamic loading and encryption to prevent unauthorized access to the applications source code.

Those are the only public apps that are being worked on at the moment.
