Thread: [Animated CSGO Logo GIF | Which Program? :l](#)

**UnknownSir** - February 18, 2016, 3:24 am

Hi

Whats the best way to animate this logo I made/

I want it to look like one of the adverts you see on: <https://csgo.exchange/>

But unsure which program to mess around with?

Hope to see some replies

Thanks ?

Hi man, there are several ways you can do this..... im guessing you just want to make the .png spin or some sort of effect, i would personally recommend using Photoshop's Timeline options to apply effects, although you could go crazy and use After Effects and render it out as a JPEG/PNG sequence and compile it as GIF in Ps ..

the ones on csgo.exchange are varied , some are basic Photoshop edits, whilst 2 seem like they use After Effects.

Hope that helped

Best case scenario: Photoshop

Worst case scenario: Illustrator

Thanks for putting time into your reply, really appreciate it.

If only there was a good decent tutorial on the internet explaining how gif's worked in Photoshop.
