Thread: [\[Made in Flash and SQL vulnerable\] Can someone help me hack a simple website?](#)

**TheExclusive** - February 19, 2016, 3:36 am

Hello everybody,

Can someone help me hacking a simple website.  
I wanne make it disappear for ever but don't know the right way to do it.  
It's made in flash and i know it has some SQL injection possibilities.  
It is also vulnerable for Slow HTTP Denial of Service Attack.

Can i take the website down forever with a slowloris attack?  
I thought it would be for a certain time, in stead of forever.  
If they restart apache then the connections are reset right?
