Thread: [Troll.jar file](#)

NiP Rae Sremmurd - February 19, 2016, 10:45 pm

Can someone test this file some kid sent me? Reply below and i'll send you it. I'm not sure what it is.

Sogomn - February 20, 2016, 10:51 am

Just decompile it. JAR files are Java archives. Java bytecode needs to be accessible so the JVM can read it.

[This one](#) is good.

If you need help understanding it, send the file to me and I'll take a look at it. Just PM me.

Juliancov1 - February 20, 2016, 11:09 am

If you think it's a virus or anything just scan the file on virus total well unless he Crypted the file then your going to have to do a lot harder stuff

You can't scan .jar files.

Of course you can. You can also scan ZIP files. And a JAR is nothing else.
