Thread: [Basic Questions for Programming Dork Scanner](#)

Ooze - February 25, 2016, 12:40 pm

These are just some basic or starter (also known here as 'noob') questions that I have about programming a Dork Scanner.

If you would like to give me more help my Skype is in the sig, all help is appreciated.

What Language should I code it in?
(Or what is the best one IYO)

Are there any tutorials to link me to
This would be awesome ^^

Should I program all my own or use some code from other dork scanners?
Also tell me if this would be technically "illegal"

How difficult is it to code this?
I have moderate coding experience

Here is what I want to code <https://hackforums.net/showthread.php?tid=5182651>
How impossible is that?

OK thanks for reading!

Atscan looks like it fits the bill.

<https://github.com/AlisamTechnology/ATSCAN/blob/master/atscan.pl>

Its programmed in Perl, but you could easily translate it to something you are more familiar with. Me personally, I would program something like this in Go. For tutorials, just networking fundamentals on how to use sockets and interface with HTTP.

Difficulty really depends on your familiarity with the topics at hand, so I can't tell you.
