Thread: [Read the description](#)

DevinThePancake - February 26, 2016, 8:53 am

I really enjoy hacking and learning new things. I was wondering if anyone had any knowledge of what I could learn to possibly push me towards the direction of being able to hack a facebook account

anonymous4 - February 26, 2016, 9:00 am

Hey OP, First You have to understand the difference between asking for help and being spoon fed. If your only intention is to use your skill to hack people then you won't get very far. There is a lot more to learn than "hacking" a Facebook account. I myself am a beginner and I don't think in that way. Read a book about pentesting that should give you some insight.

anonymous4 gave some solid advice. Hacking facebook isn't easy, and I normally don't reply to these, but fuck it. You can rat their computer, bruteforce it, or find them in a database, but I'll tell you how I got one the other day. So I found their email from their facebook, which was a yahoo. The recovery on the yahoo gave me an email like V*****@cox.net. I was able to find this email because the username on their other social media was the same. Cox is also an ISP, so I called them saying I was locked out of my account, and socially engineered them to give me a temporary password to reset it. From that I reset the yahoo, and the facebook password.

There's not many ways to do it, and if they have 2step (linked to their phone) It's useless. If you want to become a hacker, learn some code. I recommend starting with python, and then download Kali and read some books about pentesting. Hacking a facebook account really isn't hacking.

If you have any questions feel free to PM me.

Thanks man.. I already have Kali and I usually use sqlmap but I don't know how to do that type of thing for Facebook but I'm mostly asking I guess where do u start? I want to learn programming but what type of programming.. Is their a tool on Kali?

BeNT- - February 26, 2016, 9:17 am

Previous posts are gold op.

Read them again.

Kali is just Linux. It's not magic any more than any other Linux. It has tools installed is all. And in fact, installing all those tools would probably benefit you in terms of learning.

You have a long way to go.

A tool on Kali to learn code? No. Just read some books about python, you can try videos, but thats not how I did it.

Call me a kid and doesn't even know what LQ is.

Typical hypocritical teen with ZERO common sense.

anonymous4 - February 26, 2016, 12:14 pm

OP all these guys are calling you LQ and a skid? Tell them what you told me. If you really did what you told me today then you should be in the advance section. I still don't understand how you know so much but you're here asking how to "hack" a Facebook in the beginner section. Wtf is going on??

Arbitrage - February 26, 2016, 12:31 pm

If you want to hack a Facebook account as in gaining access to it, then start reading tutorials on Facebook hacking.

You will get farther than if you just post a thread asking "How".

lopata1337 - February 26, 2016, 12:32 pm

thanks man for this i read your posts

Lol what did he say he did?

anonymous4 - February 26, 2016, 2:00 pm

I am confused. OP why let these guys bring you down, yet you know how to gain access to your school district and boot up Linux through your school computer using proxy chains and a VPN's. Please explain. When we talked you sounded like you know what you were doing. Op I'm not trying to put you on the spot.

Lol no i do this to listen to people talk crap for fun xD

But truthfully I don't know basics well..

Well dude,dont let these guys bring you down. We all need to learn/start somewhere. To get into a facebook account look up their name in a database or try rat/keylog their Computer. Or if they use android try get some help with setting up an android rat. I wish you the best of luck ?

Calf - February 26, 2016, 11:36 pm

Step #1: Ask them for their password and email. (either straight up or SE)

Step #2: Log into said Facebook and change their password and call yourself a "hacka"
