Thread: [Reddit :: Bot Software - Custom Coded, 100% working, one copy only](#)

exploit.c - February 26, 2016, 10:02 am

Hi all,

I'm selling the source code to my custom coded, multi-bot reddit bot.

I'll accept offers for it, but don't low-ball me.

This is the only successful bot that will never get auto-compensated by Reddit, nor detected. It is sophisticated and autopilot. Comes with exclusive method on how I do it all, and well documented code

Some information:

What the bot can do? [\(Click to View\)](#)

It is multi-threaded bot, and can login to accounts like a real person would via clean proxies (not blocked/filtered by reddit), and upvote/comment/downvote/comment upvote/comment downvote/subscribe to subreddits/create posts on subreddits.

It's 100% custom coded, lightweight, and fast as heck. Screenshots available in screenshot tab.

Bot speeds [\(Click to View\)](#)

On a 100mbps connection, 300 accounts, 300 proxies all working, fresh I was able to post 295 comments in less than 1 minute.

Using the same network, 120 accounts, 300 proxies all working, fresh I was able to upvote by 115 votes on a post in less than 10 minutes.

These are some speeds, I can do faster and slower, it depends on what I feel like doing.

No issues [\(Click to View\)](#)

The bot has no issues. Reddit is known for automatically detecting bot upvotes/downvotes, and compensating for them -- this bot and method I wrote have NEVER been detected and reddit has never compensated for them as they appear 100% legitimate people doing the requests.

What's included in the purchase [\(Click to View\)](#)

In the purchase you get:

1. My tools (+source code)
2. My methods for securely creating accounts
3. My methods for ensuring no compensation from reddit

4. My methods/tools for getting clean non-filtered proxies

5. Tools to create reddit accounts (note: no GUI on the creation tool, it's a command line)

Pricing ([Click to View](#))

Single Buyer + exclusive rights : \$1,200

Dual Buyer : \$600/buyer

Quad Buyer : \$300/buyer

Payment methods:

Bitcoin only. No PayPal unless I deem you trusted. If PayPal middleman is enforced, and will be a common agreed upon middleman.

SERIOUS BUYERS ONLY

I've given away reddit services here before for free, with satisfied people:

<https://hackforums.net/showthread.php?tid=5183354>

You get free support from me for 3 months, and I'll assist you with setup up, configuring, running your own shop, etc I'll code you your own shop so it stands out, unique, original with a custom theme.

Screenshots ([Click to View](#))

From my bragging thread I posted, which you can also see how profitable reddit is -- over \$300 in one day alone (link: <https://hackforums.net/showthread.php?tid=5183623>)

Photos:

Yes, the launcher is command line in node, the actual application however is pure C, native. The Node also acts as the fully web-server with API (talked about in "extras" section), fully automated. I can code a

It's highly profitable:

Extras ([Click to View](#))

it has it's own API built in and web server built in so you can easily automate all these tasks. For an extra \$50 I'll setup a fully automated shop for you.

Additionally, I'll provide you with locations you can host it, which are the fastest, without issue, and for a cheap cost.

Currently my service it costs me \$29.95 roughly to run.

New feature being implemented into the core: Shadowban detection. This will use two methods to detect if your account has been shadow banned by reddit.

To discuss purchasing, please send me a PM.

PVCK - February 26, 2016, 10:08 am

Looks nice. Exploit.C is one of the best coders that I can vouch for.

If you're offering any vouch copies please let me know.

exploit.c - February 26, 2016, 10:09 am

Thanks for the vouch.

No I'm not offering vouch copies, but I do have my free thread people can claim free reddit upvotes/downvotes/comments/etc. from.

Chan Wong - February 26, 2016, 10:48 am

Wtf why so expensive? How is this good?

lilyachty - February 26, 2016, 10:51 am

what type of posts does this make? can you choose subreddit? thanks

exploit.c - February 26, 2016, 10:54 am

(Feb 26, 2016 11:48 AM)Chan Wong Wrote: [\[CITE\]](#) Wtf why so expensive? How is this good?
This is good because it's 100% custom, works 100%, never been compensated nor detected by reddit, fast as hell, cheap to run and highly profitable. This has made me thousands, just today alone I made \$100 selling services from the bot. The only (that I know of) bot that isn't and hasn't ever been detected by reddit.

(Feb 26, 2016 11:51 AM)lilyachty Wrote: [\[CITE\]](#) what type of posts does this make? can you choose subreddit? thanks

You can choose the comments/posts, subreddits, etc.

Chan Wong - February 26, 2016, 11:27 am

You can choose the comments/posts, subreddits, etc.

Im not a proffesional redditor. So how can this bot make you thousands of dollars?

exploit.c - February 26, 2016, 11:31 am

(Feb 26, 2016 12:27 PM)Chan Wong Wrote: [\[CITE\]](#) Im not a proffesional redditor. So how can this bot make you thousands of dollars?

People buy upvotes/comments/downvotes/etc. for \$.

Pittinger - February 26, 2016, 11:35 am

(Feb 26, 2016 12:31 PM)exploit.c Wrote: [\[CITE\]](#) People buy upvotes/comments/downvotes/etc. for \$. Or better yet use it to boost your content to the top of a subreddit or even a frontpage. This can net millions of clicks!

This would work very if you had a funfacts site or something similar.

Good luck with sales OP, I had no idea this exists!

Yep, I've had people pay over \$200 for 2000 upvotes.

If you boost to the front page using this for example and you monetize your website for example you can net thousands-millions of clicks and a lot of \$ if monetized correctly.

Chan Wong - February 26, 2016, 11:55 am

Looks like a really good deal. Good luck with sales man :)

Kedox - February 26, 2016, 12:25 pm

\$1200 seems a bit steep lmao

exploit.c - February 26, 2016, 12:28 pm

(Feb 26, 2016 01:25 PM)Kedox Wrote: [\[CITE\]](#) \$1200 seems a bit steep lmao

I think it's fairly priced for what it is, it's sophistication, etc. My original sale price was going to be \$2,000, but I lowered to \$1,200.

Kedox - February 26, 2016, 12:29 pm

Lol, but for \$1200 surely you could just get a coder like +Haze to make you one ? Wayyyyy too steep tbh

exploit.c - February 26, 2016, 12:31 pm

(Feb 26, 2016 01:29 PM)Kedox Wrote: [\[CITE\]](#) Lol, but for \$1200 surely you could just get a coder like +Haze to make you one ? Wayyyyy too steep tbh

I'm sure you could do that - and if you want to, go ahead.

I'm selling my software, source, with a proven track history, income, etc.

99% of all "bots" for reddit either:

1. Are shit

2. Get detected super fast

3. Just cop and paste of other open-source bots with small modifications

Mine isn't any of those three. This is wrote 100% from scratch.

I'm accepting offers for this, but don't low-ball.

Pittinger - February 26, 2016, 12:57 pm

Creating a bot for this isn't too hard I would imagine.

Creating a WORKING bot that can fool Reddit's algorithm on the other hand... now that's something.

Kedox - February 26, 2016, 1:03 pm

(Feb 26, 2016 01:57 PM)Pittinger Wrote: [\[CITE\]](#) Creating a bot for this isn't too hard I would imagine.

Yeah, I understand the hard work that must have gone into this. BUT, \$1200 seems way to overpriced unless this took you 100+ hours to create.

exploit.c - February 26, 2016, 1:04 pm

I can assure you I've put a lot of time in this.

Spanning 78 hours roughly.

To further address your comments, this isn't some just rush "omg make big money scheme" - this has had a ton of work put into, ton of testing, trial/error, tons and tons of hours. It's super clean code, well documented for the buyer also.

Pittinger - February 27, 2016, 1:40 am

Also if you are familiar with how reddit works and wont abuse this, you can easily make that money back.

Reddit "hugs" (reddit traffic crashing the site once it goes viral) are pretty common. Just need to convert that traffic.

And you can do it again and again.

exploit.c - February 27, 2016, 4:01 am

(Feb 27, 2016 02:40 AM)Pittinger Wrote: [\[CITE\]](#) Also if you are familiar with how reddit works and wont abuse this, you can easily make that money back.

Exactly. It's easy to make money from.

New feature being implemented into the core: Shadowban detection. This will use two methods to detect if your account has been shadow banned by reddit.

exploit.c - February 28, 2016, 5:43 am

Still for sale if anyone is interested. Open to offers.

MimeInsane - January 26, 2017, 9:33 am

does this still work? also where do you go to get people to pay for upvotes and such

exploit.c - January 27, 2017, 6:55 pm

Still for sale, let me know. Works 100%

FunctionDev - January 27, 2017, 8:59 pm
