Thread: [How to read text from xml nodes](#)

hunters - March 2, 2016, 9:49 am

Hello HF,

This is a sample xml

Code

```
<Contents><Key>000018a19cfbbcb12286c4c051b09b27.jpeg</Key><LastModified>2016-02-10T23:58:24.000Z</LastModified><ETag>"000018a19cfbbcb12286c4c051b09b27"</ETag><Size>227621</Size><Owner><ID>07ba55931634353d81b28388db73b19c576cefcc3f5a19be3137e5cbf691f554</ID><DisplayName>admin</DisplayName></Owner><StorageClass>STANDARD</StorageClass></Contents><Contents><Key>00002627b319131d0de89347c32ad3b6.jpeg</Key><LastModified>2016-02-13T12:34:54.000Z</LastModified><ETag>"00002627b319131d0de89347c32ad3b6"</ETag><Size>102336</Size><Owner><ID>07ba55931634353d81b28388db73b19c576cefcc3f5a19be3137e5cbf691f554</ID><DisplayName>admin</DisplayName></Owner><StorageClass>STANDARD</StorageClass></Contents><Contents><Key>00002aee6026afbd407096d212d88344.jpg</Key><LastModified>2016-02-21T22:44:02.000Z</LastModified><ETag>"00002aee6026afbd407096d212d88344"</ETag><Size>69219</Size><Owner><ID>07ba55931634353d81b28388db73b19c576cefcc3f5a19be3137e5cbf691f554</ID><DisplayName>admin</DisplayName></Owner><StorageClass>STANDARD</StorageClass></Contents><Contents><Key>00002e987b80919a095bf8da63d8399b.jpg</Key><LastModified>2016-02-22T15:02:14.000Z</LastModified><ETag>"00002e987b80919a095bf8da63d8399b"</ETag><Size>166892</Size><Owner><ID>07ba55931634353d81b28388db73b19c576cefcc3f5a19be3137e5cbf691f554</ID><DisplayName>admin</DisplayName></Owner><StorageClass>STANDARD</StorageClass></Contents>
```

i want to read the text between all nodes named '<Key>' (without quotes).

can anyone have a suggestion. how to read ? ? ?

Support™ - March 2, 2016, 10:11 am

PHP Code

```
<?php
Dim XML As XmlDocument = New XmlDocument()
XML.Load("Filepath.xml")
Dim KeysList As XmlNodeList = XML.GetElementsByTagName("Key")
For i=0 to KeysList.Count-1
Console.WriteLine(KeysList.ItemOf(i).InnerText)
Next
```

I think this will do.

Not sure if this is what you're looking for but I found a few links.

<http://stackoverflow.com/questions/17025545/read-all-nodes-and-elements-in-xml-vb-net>

<http://stackoverflow.com/questions/10725820/how-do-i-get-the-value-from-a-specific-node-in-an-xml-file>

How about you post your code so we can help fix it? How do you expect we can fix your code if you havent posted your code?

Josh? - March 2, 2016, 2:31 pm

Pretty sure it's

```
Code Dim XML As XmlDocument = New XmlDocument()  
XML.Load("Filepath.xml")  
Dim KeysList As XmlNodeList = XML.SelectNodes("Contents/Key")  
For i=0 to KeysList.Count-1  
Console.WriteLine(KeysList.ItemOf(i).InnerText)  
Next  
Or if the XML is in a string:
```

```
Code Dim XMLString As String = "XML HERE"  
Dim XML As XmlDocument = New XmlDocument()  
XML.LoadString(XMLString)  
Dim KeysList As XmlNodeList = XML.SelectNodes("Contents/Key")  
For i=0 to KeysList.Count-1  
Console.WriteLine(KeysList.ItemOf(i).InnerText)  
Next
```

Honestly this isn't that difficult.

Apply yourself instead of relying on others to provide a solution.

only first node's text. not all nodes ('<Key>' node). ?

It is because your XML is messed up.

You have multiple root elements with <Contents> tag and you will also need need to escape the double quotes(") in <ETag>.
