Thread: [Ultimative RAT Start Guide - \[RAT, DNS, VPN, VM, Crypter, personal Spreading Methode\]](#)

Selfpwned - March 6, 2016, 8:46 am

Hello! ?

Since i've always held back and never actively shared my methods and experiences in forums I decided to revive my web-presence with a self written E-Book.

Im active in the RAT business for quite some time already and managed to earn a good amount of money.

Since my method isn't actually that hard I summed up everything in a 15-paged E-Book.

Infos

What even is a "RAT"?

- A "RAT" is a Remote Administration Tool through which you have acces to other PCs , comparable with Team Viewer.

How exactly can you connect to other PCs with this?

- An exe which is going to create a connection to your interface is going to be executed on the PC you want to infect.

What can I do with the PCs?

-You can do alot of things if u have acces to other PCs.

You can read their passwords which will eventually give you access to important company data.

Of course you can also just sell the Netflix/Spotify accounts that you get through this, or you directly buy something with Paypal through their PC since you'll have no problems with restrictions then.

Is it illegal?

- No not at all , it's completly legal to have acces to other PCs even though you have no permission for it.

It's also legal to buy something through their Paypal account , the vics are cool with that they usually sit back and watch what you are doing, which you can see through their webcam. [/Irony Off] ?

Will instantly have 1.337€ if i follow your tutorial?

- If you really are one of these people that ask these questions then probably no. No sweat without sweat.

You obviously have to put in some work especially in the beginning.

But after a decent amount of time everything will work out so well that you can just put your feet up. That's how it is for me right now.

Content

In the E-Book you will be explained what programs you'll need and how exactly you start with it. Also there's going to be an explanation how you safeguard yourself when you get your first "Vics" / Clients.

In the following segments you'll further be explained how you make your file undetectable by AntiVirus systems and how you manage to get a lot of clients without much work.

I myself still use this method and guarantee you that you're going to get HQ Clients after the first days already (Germany, USA, UK, etc.)

It's my first E-Book and it's probably not perfect.

But everything should be understandable and described precisely, besides a lot of stuff is visualized.

Facts

Effort: 6/10

Required(€): \$45 for programs, VPN etc.

Preparation time: 1-5h depending on how well you do.

Full support via PM or Jabber included! ?

(Mar 11, 2016 03:30 AM)Boxxy™ Wrote: [\[CITE\]](#) Got a vouch copy and here's my review.

This eBook explains in detail how to setup a RAT, use it, where you can get RATS, how to get clients, how to make servers that connect to RATs, and also crypting techniques + more. It's a very well done eBook, and goes into detail all about RATs. It's an awesome guide and very informative. Although it's not extremely visually appealing, such as not a huge amount of colors etc, it doesn't matter, since it's got the information which is the most important thing [+ Most eBooks use this format anyway]. The information and the guide definitely cancels out my little picky things I'm pointing out. Overall it's an awesome investment to get into the world of RATing and this will definitely help people out.

Information: 9/10

Visual Appeal: 7/10

Step by Step Instructions: 10/10

Ease of Use: 8/10

I would even recommend beginner users to use this, since it will get them started on the actual facts about RATs, how to use them, why you would use them etc. Great eBook and would highly recommend!

(Mar 6, 2016 09:50 AM)Mario® Wrote: [\[CITE\]](#) Is this a fucking joke? You said it's not illegal to gain access to others computer without permission and you also said its legal to buy things with your victims PayPal...

It was full of irony, but okay. Maybe I need to mark it as a sentence or irony.
