To anyone having any sort of problem I am willing to help free of charge.

I have worked quite a lot with wordpress in my past and I thought i'd share my knowledge to anyone having problems.

Keep in mind I am no guru compared to many others, but I am willing to help and research on errors and help you fix them etc.

Thanks HF

Charlie

Because I made this thread?

This makes users like @Lokii aware that they can PM me free of charge for support.

Why do you ask?

Hey I am having problems with establishing a connection to my SQL database on SPAM.

I have a ticket open with them but thought I would try you too :)

I can login to PHPMyAdmin for the DB via SPAM cpanel.

My wp-config.php file is configured correctly as far as I can tell, after reading MANY of the same tutorials...

Hey dude,

So I have a Portfolio website, simple e-commerce website and two very simple restaurant projects. Which I all built in Wordpress. I want to make the portfolio website my mainpage where you can navigate all my projects. But I can't find out how to get it to work, I have tried Cpanel subdomains and wordpress multisite but I can't get it right. Example: Portfolio = domain.com, e-commerce = subdomain.domain.com, restaurant = subdomain.domain.com

Could you help me with this problem you seem to have great knowledge and I'm pretty new with wordpress.

Every time I try and upload a new theme to my WordPress it takes it's time then says this.

"Are you sure you want to do this?"

I keep trying to find out but can't find a solution.
