Thread: [Changing Window Title To Random String](#)

Meterpreter - March 7, 2016, 7:44 pm

How would I go about changing a Win32 Window Title to a random string? I have a basic idea just wondering how it would be structured and written.

Here is my random string generation:

```
Code void gen_random(char *s, const int len) {
    static const char alphanum[] =
        "0123456789"
        "ABCDEFGHIJKLMNOPQRSTUVWXYZ"
        "abcdefghijklmnopqrstuvwxyz";

    for (int i = 0; i < len; ++i) {
        s[i] = alphanum[rand() % (sizeof(alphanum) - 1)];
    }

    s[len] = 0;
}
```

__readgsqword - March 7, 2016, 8:34 pm

```
SetWindowTextW(FindWindowW(0,L"MyCurrentWindowTitle"),L"New Title");
```

In C# you can do:

```
Code public static string GetUniqueKey(int maxSize)
{
    char[] chars = new char[62];
    chars =

    "abcdefghijklmnopqrstuvwxyzåäöABCDEFGHIJKLMNOPQRSTUVWXYZÅÄÖ1234567890?
    ?????????????????????????????????????????????????????????????".ToCharArray();
    byte[] data = new byte[1];
    RNGCryptoServiceProvider crypto = new RNGCryptoServiceProvider();
    crypto.GetNonZeroBytes(data);
    data = new byte[maxSize];
    crypto.GetNonZeroBytes(data);
    StringBuilder result = new StringBuilder(maxSize);
    foreach (byte b in data)
    {
        result.Append(chars[b % (chars.Length)]);
    }
    return result.ToString();
}
```

Then to change the current form's name you can do:

Code this.Text = GetUniqueKey(15);

Of course you need:
using System.Security.Cryptography;

Hope I helped

Sick of seeing C# stuff in this board.

OP: Take the banned guy's advice.

SetWindowText is what you're looking for.
