Thread: [Balloon Crypter\[Free Crypter For Balloon Executables\]](#)

ng-Coder - March 8, 2016, 1:37 am

Balloon Crypter is a free Crypter for Balloon Executables, please note that this won't work for PE that are not balloon.

Coded in C++, bug reports are welcome.

Crypter v0.3.4: <https://www.sendspace.com/file/2hcj07>

MD5: C8E81ACF5D88BB51E25059DFDD1FDE3D

SHA-1: D6EADD1870734540079B781CE2DAF3AD88A36E4E

Test Bin: <https://www.sendspace.com/file/1cqphh>

MD5: 42B4C403AA1D8ED0671AFFB699D2739D

SHA-1: FC59BF3D3E11E0194837766299F41FB82A405E62

.

From Balloon Crypter v0.3 you now need to find stubfile yourself while I update only the crypter.

You can still make old stubs FUD by changing icon and file info using PEC

Through a team of software researchers and reversers that I belong.

It's open in few private forums too.

I made little explanation about balloon here: <https://hackforums.net/showthread.php?tid=5197517>

Without anti and junk instructions yes you can make it the smallest crypter ever..

But 10 bytes? Nah!

I meant, in instruction size and without counting anti-av measures, 10 or 15 should be way enough to hold such type of crypter, but well.. not much compatible, generating no iat executables is rather painful on big projects, unless you design it a way that makes it easy, but still, IAT is the inbuilt feature, you could easily code a preprocessor doing that work for you though.

Yes painful but compiler tricks and tweaks can make our life easier than we believe ?

Codefuser - August 31, 2016, 7:35 am

To all of the "Does this work with _____?"

Is it Position Independent? If you don't know what that is and the product doesn't advertise that then it probably won't work with it. Anything that is .NET/Java won't work.

Example: Babylon, DC and DarkTrack won't work. NJRAT and LL won't work. Neither will Imminent Monitor.

I have paid crypter, but no more slot for new customers, you can use any working crypter on HF for formbook.

bandalagoon - July 30, 2017, 11:43 pm

reconsider to give me a slot for crypter. I just wasted 75USD on darkeyeprotector, yet it didn't give me what I want, But your old balloon stub that was updated on 26th gave me some formbook logs today

progo35 - August 3, 2017, 5:19 am

Can i get the password ? thanks

ng-Coder - August 12, 2017, 2:51 am

From Balloon Crypter v0.3 you now need to find stubfile yourself while I update only the crypter.

ng-Coder - September 15, 2017, 2:20 pm

Crypter updated:

You can now use either exe or dll as stub, the crypter will convert the dll to exe for you.

Please don't use OS executable files as stub, you should always use installed app's files.

.

ng-Coder - September 24, 2017, 12:46 pm

Crypter Updated, now v0.3.3

Use any executable (exe or dll) from installed apps on your PC as stub, test using testbin.exe (<https://www.sendspace.com/file/1cqphh>) as bin.

He explained it in the 2nd or 3rd page. It's an executable that works with basically any OS versions.

You gotta use tools like FormBook or X-Net to use this crypter.
