Next time try use the search button. The RAT section is filled with Guides on how to spread your file. I recommend to use the Torrent spread method, this got me a lot of slaves before I had my file uploaded on Torrents.

So, I've got a RAT executed on a PC (Quasar and KilerRAT, KilerRAT for the extra surveillance) and the mic-tapping seems to not work. Was wondering if you could share any knowledge about plugins (I think KilerRAT supports .DLL plugins) so I could maybe just replace what doesn't work? Then again, maybe this PC is just an isolated case. It's also Win10.

You could try repairing your .DLL files and see what happens. I don't know what it might be a laptop with built-in mic, or a Desktop computer without a mic at all. Are you sure this bot has a open Microphone?

Yes. It's a desktop with both a webcam w/ mic and a wireless headset.

Ok, seems like I found "my man" here.

Thank you!

1. There is no such thing as a BEST FREE/PAID RAT. Look for what you need, that's the best solution. (Stay away from DarkComet though)
2. Paid DNS I'd go with Armada's DNS, don't know about free I'm waiting for a reply from OP myself.
3. Really..? A VPN is a VPN just make sure it doesn't log and has port forwarding.
4. Not sure about this.

Hope this helped.?

1. A recommended free RAT would be Babylon currently as it is popular easy to use but also stable. If you want a RAT that has advanced features and is kept updated I would go for LuminosityLink RAT.

2. In my opinion there is no reason to pay for a DNS service because there are enough free ones that just work as simple and without being associated with Microsoft. Try freenom.com

3. I would find a offshore VPS to host your RAT on. Then find a VPN that doesn't keep logs to be fully undetected. Besides I would use a good DNS Service.

If you're using a VPN for your RAT then you obviously you use that IP. If you're using your own IP address you'll enter your own IP address.

I want to get back into RAT'ing (I have IM4 and ByteCrypter Lifetime) but I just recently moved and switched ISP's so I don't know how to port forward.

Also, is it really that bad if I don't use a VPN? As I said I have no money to buy a paid one.

I can help you port forward, you can PM me your Teamviewer details and hop on quick. If you want to use your RAT for getting bots it's always preferable to use a VPN. However if someone has a feeling that hes/she got infected and it might be one of those people that have experience with computers he can easily backtrace your IP. So for your own safety you should be using a VPN. But that's completely up to you. It's a risk you take.

I myself don't use a VPN when using my RAT. Basically because I know for what I'm using this software for.
