Yeah, you sure aren't a sketchy motherfucker

da_king_69 - March 9, 2016, 4:48 pm

alright.. up to you,

i could show you all you need to see, and i wont lie, its still alpha and esp, but were modding it daily,

well the guy is.

when i say alpha i mean that because of it just esp, by 1st of april we will work on aimbot, only a few people have it, so yeah..

like i said i could show you the stream while were on the same server together

Evanescence - April 30, 2016, 12:15 am

I'd also love some ESP hacks and maybe aimbot

RS-4 - May 10, 2016, 11:29 am

Please don't ruin a perfectly fine game L)

Lynch - May 10, 2016, 11:35 am

Artificial Aiming has the best rust esp and aimbot + fun features like speedhack , jumphack , no recoil/spread.

Just my opinion.

lol i would never use aa ever again. worst hackwebsite out there imo always being attacked and detected. let it be noted that there customer service " doobs" is the worst guy youll ever meet thinks hes some kinda god behind his keyboard.

aquavitae - June 18, 2016, 2:14 am

AA are an interesting lot as they have a lot of outdated hacks which aren't updated on a regular basis for different hacks, but have a vast scope for multiple games but overall they don't relevantly speak kindly to their customers.

I can personally agree with this. Actually their hack has been the best and most undetected hacks out of every single hacks site that was selling for rust. But i have had a run in with doobs, which is why I am no longer able to even go to artificial aim as he blocked and banned me from every which way possible. Just because I said his customer service was horrible, after his pathetic attempt to to try and explain why i was getting banned oiver and over. (which late I found out was a hardware ban. I tried talking with him and others admins which all other admins seems to be chill, but doobs would instantly kick me from said channels not even giving me a chance to talk to him. He definitely thinks hes some kind of god behind his keyboard in his moms basement. I would never do business with them ever!

Hummel - October 9, 2016, 9:26 am

Artificial Aiming are the best on the market, if you get one from here for cheap (or even expensive in some cases) you'll be banned fast I reckon.

However, even with Artificial Aiming's hacks, they wont keep you safe even with the protection it offers. Rust's EAC anti cheat updates randomly, meaning you'll ultimately be caught.

You're also limited to Vanilla servers also due to Modded servers having custom plugins that AA doesn't protect against.

If you're caught by EAC, you're pretty much done on rust as they seem to detect you even with a new steam account/game.

You have it backwards. Private sellers are typically the ones you want to go for (but obviously I can't vouch for all). With AA, you get banned within 12 hours. What's the point of that? Whereas me and several other users of my cheat have been playing for months without a detection.

HaruhiAA - October 10, 2016, 8:04 am

Sup Haruhi here,

If you guys want to come back, just pm me your account name and ill resolve the issue.
If you don't want to come back that's fine too.

About Rust, it's being privatised. It's no longer for sale.

Lol, im banned but ill never come back to that site again, enjoy the ripoff report I wrote for you guys and thanks for the refund. You can tell doobers I said that I still think helios' work is shit. What kind of retard business puts some rage inducing 13 y/o in charge of customer service... You're all the most autistic motherfuckers ive ever had the misfortune of dealing with and im just glad you dumb fucks didnt get my money. If anyone buys anything from them then be sure to use a credit card so you can easily refund it through your bank. They dont keep their cheats updated and if you have an issue with the cheat you're fucked because doober will find some way to be offended by you and then ban you, even if you're literally being as kind as jesus himself.

I've been using HyperCheats but there is no SilentAim on it, was told it was being added but I think they're no longer doing it. Looking for another provider again now.

Yeah but \$300 for an invite... And it's not amazing once you get it for that price either. The Silent aim for example only works downhill.
