DO NOT CONTACT ME WITHOUT READING THE FOLLOWING!

Spoiler [\(Click to View\)](#)

Make sure that:

- Make sure you have Teamviewer installed BEFORE contacting me!
- Make sure you have a RAT installed and ready to go BEFORE contacting me!
- Make sure you have the VPN software installed and ready to go BEFORE contacting me!

Some quick notes:

- Do not ask me to setup software that has nothing to do with HF.
- I will not setup free VPN's. It's most likely nothing more than trouble and 1\$ isn't much to spend on a proper VPN.
- I will NOT help you with anything spreading related. You can ask but 99.9% of the time I will deny your request.
- If you by some miraculous way manage to piss me off all contact will be seized immediatly, do not come crying here. It will have it reason and if you come cry here I will expose it.
- Need express help? I'm busy but you can't wait? Pay me 5\$ and I'll help you right there no matter what time it might be.

My extra services!

Spoiler [\(Click to View\)](#)

- I give test installs on a VM.
- I write ebooks on your products.
- I make tutorial videos for products.
- Something I can't mention, ask me on skype.
- I can get you bots.
- I will advertise your product. (only if it's HQ)
- If you want the signature of your product here that is possible. PM me for details.

Setup Videos.

F.A.Q

Spoiler ([Click to View](#)) THIS IS STILL UNDER CONSTRUCTION! If you have any requests let me know.

Q: Will you link me?

A: No, I will not. Use the search button.

Q: I did port forwarding but the port isn't open???

A: Most likely you are not listening to the port or your firewall is on.

Q: What crypter do you recommend?

A: It all depends on your RAT and budget. Overall cyberseal is a great crypter.

Q: What RAT do you recommend?

A: Luminositylink. Contact me if you want to purchase via paypal.

Q: Is a VPN necessary?

A: No, it is not. It is highly recommended however.

Q: Will you crypt a file for me?

A: No, I will not. Don't be a scumbag and buy a crypter.

Q: Will you be my personal google?

A: No, I will not. You can ask me questions but I do draw a line somewhere.

Do NOT do any of the following.

Don't hesitate to ask me any questions!

Spoiler ([Click to View](#))

RAT Related

- Do not use Darkcomet for the reason that it has serious security flaws. (I will deny you help if you insist on using this RAT)
- Do not use Blackshades for the reason the police took over the product.
- Do not use NO-IP for the reason that is monitored by Microsoft.
- Do not use duckDNS for the reason that they'll give you honeypots.
- Never use the same port for 2 RATs. (or program in general)
- Participate in banking fraud.

Crypter Related

- Use startup in both crypter and RAT.
- Use any settings in both crypter and RAT.

- Never crypt a crypted file.
- Inject into a process when using startup on a .NET RAT. (Ex. Luminosity)
- Do not cry to crypter owners about a 10/35 detection rate, it's your own fault.
- Assume scantime and runtime is the same.
- Do not use the website www.virustotal.com

I know how to make a RAT sever etc, But i have no idea how to send it to the victim, Can you bind it to a another file type and CRYPT it so the file can be sent via facebook message? Because EXE's cant be sent via facebook or email, Perhaps i should just look around for some one to make a weblink url that once clicked on self installs RAT.

You can upload the CRYPTED file to a website (prefer that you zip it first) and make a direct download link, send that link through facebook.

Do make sure the website does not distribute to AV companies.

When your port is forwarded everyone who got your ip address can get into your files.

Am i right or am i saying bullshit?

If you've got a modem, most likely you'll need to go the website of your internet provider and log in to your account. There you should have some way of port forwarding, if this is not the case you should be able to login to your modem somehow and port forward from there. ?

Do you mind answering a few questions ?

- What's the point of using a DNS ? why not use your IP ? or a VPN IP ?
- What are some good ways to stay anonymous when using a RAT ?
 - If you could only buy one of the 3, what would be the most important?
 1. VPN
 2. DNS
 3. FUD Crypter
- Is port forwarding needed? And what's the point of it ? From my understanding it's used to open a port if none are open? Why not use Nmap or such and Scan for a open port? and use that port?

Sorry if these questions are noobie

- What's the point of using a DNS ? why not use your IP ? or a VPN IP ?
I'm not really sure. I guess it's a little extra layer of security and should your IP change, you won't lose all your clients. You'll just have to update your IP on the DNS website. All this IP stuff isn't really my thing.

- What are some good ways to stay anonymous when using a RAT ?
Unless you're doing stuff like carding, a VPS and VPN should suffice. (Maybe not when you're holding a couple thousand clients but at that point you'd need a botnet anyway)

- If you could only buy one of the 3, what would be the most
If you're only going to buy 1 out of the 3 I guess a FUD crypter.
If you're going to buy all 3 of them eventually do it in this order. VPN - FUD crypter - DNS.

- Is port forwarding needed? And what's the point of it ? From my understanding it's used to open a port if none are open? Why not use Nmap or such and Scan for a open port? and use that port?

It's needed cause having an open port allows people to connect to your computer. And you can't use another port cause using a port that's already being used (the only ports that'll be open by

default) will cause massive problems. (Once again not an expert with all this IP stuff)

You're welcome mate. ?

PERSONAL REVIEW

I approached [PurpleKief](#) through PM. He was very quick to respond (within an hour) and agreed to communicate with on Skype.

He has knowledge for VPN, PortForwarding, RAT, Crypter, etc.

He gave me guidance for better selection and set up.

I even carried out BTC exchange transaction which was really smooth.

He went out of the way to help me out!

In all I would say I found a trustworthy friend on HF.

ThankYou brother ?

Yes, it receives my IP address, however it still gets a time out request. I'll be gone for a few days so i'll try to figure it out. If i can't then i'll ask again.

You don't need to worry about the time out request. The same thing should happen if you just ping your IP and not your DNS. ?

No, port forwarding through a VPN doesn't require you to do it on your router.
And I don't know why phone internet won't work either, not a network specialist.

If your talking about a no-ip alternative. I recommend purchasing a cheap domain from namecheap (\$0.88) and using their dns. No-ip & other free solutions will block your domain after about a week.

The traffic from both RATs will clash with each other ultimately creating unstability and in most cases no connections at all.

Did you try assembly cloning?

I have been using byte for a year and I know from experience that he tends to take a while to update the FUD but you can always get pretty close to FUD if you do the options right. ThanksWhere does it say I do anything of the sorts?
There's plenty of free hosts out there too.

I'll be closing this for yet again another few days.
More personal reasons, there will be no paid help this time.

Thank you for understanding.

There's a thread for it a few pages back, you're wasting your time though, it doesn't work anymore anyway.

Use quasar rat or Babylon.

odedor444 - September 15, 2016, 9:52 am

Babylon give the slave a notification that the rat is running on his pc.

i will check Quasar now.

What file uploading websites are good that don't distribute to AVs? And also what does Gen:Variant.Razy.85479 mean and how do I solve that when crypting?

Icon detection/assembly detection. If you still get issues try pumping the file.

What crypter are you using? When I get Razy detection with Cyberseal it's 99% filesize.

Usually around 1MB file output is the golden spot for cyberseal.

I'll be available for a bit to come, feeling lazy tho. :)

This is the worst scammer service ever. He connects to your PC via teamviewer and then silently push some .exe's and suddenly your mouse frozen and he is trying to delete random programs on desktop. Dont trust him.

Oh no you've caught me..

Jokes on you bud, I don't do Teamviewer. People let me run my IM4 stub on their PC.

Perks of being trusted.

Very welcome mate, appreciate it.

I'm ending my RAT setup thread. It's been nice, it's mainly thanks to all of you that chose me as your assistant that I am where I am now.

Sadly I no longer have the determination to continue this, I'm going to focus on cash from now.

This means that if you've got me on skype, don't be expecting an answer. It won't be there. (will probably make a private skype)

Will there still be guides?

Maybe. I wouldn't count on it, but I might feel like it at a random moment.

But I need you!!

PM me. My aim is money right now, you got money I got time.

I don't have any money.. :(

You can find me @ <http://imminentmethods.net> or <http://orcus.pw> they'll pay me for you.

Last note

Thanks to those who were pleased with my service and vouched for me as a tutor.

All of you made this account what it is now and it's great to see determination does get you somewhere.

Best of luck with your RAT struggles.

- Kief.

PS: Thread will remain open for 2 more days, in case some people have anything to say.
