Take caution before dealing with this user.

I added him on Skype hoping to get some work done. His name is Kaleb, he suddenly sets his display name as Web Developer | DavidTM and changes his avatar to a image that read Coder. It felt like he was putting on an act.

I sent him the PHP file that I needed edited, he then began asking me for private site files that were unrelated to the file I sent him. I asked why, he replied "I just want to check them out". I'm assuming he planned to leak them or resell them.

I felt like something was fishy, so I asked to see his portfolio. Expecting to see a portfolio website or some type of Behance page, he didn't. Instead he linked me two websites of established businesses who have been featured on Forbes magazine claiming that he built them.

I found it very weird so I began pressing him, asking him more questions. He then replies "I built them. They aren't random sites. Lets just close this if you want me to do this for you send it here *BTC Address Snipped*"

User is very sketchy.

So whats the problem with my Skype name? I have been using it for a while and I've had no complaints from anyone.

I was involved in customization or building those two sites from scratch so yeah. Do you think it's that hard to get your site onto Forbes? If you have the money just get a guest post n that's it.

The only reason you posted this was because I didn't agree to do the work first and then you send payment. I don't go around my terms of service no matter how many reps you have.

Next time before PMing me have a look at my terms.
