Thread: [Removing of advertising virus?](#)

Maxim the bot - March 12, 2016, 9:05 am

I have these random popups with advertising on my PC, i recently downloaded some crap and it did for sure come with that, i can reset my PC a week or so, but i would really rather not. Anyone that know how to remove it if i cannot find it?

supyosh - March 12, 2016, 9:12 am

You might want to start by running an MBAM scan, (Malware Bytes Anti Malware) malwarebytes.org/

I'd also strongly advice running AdwCleaner, bleepingcomputer.com/download/adwcleaner/

Perhaps, if that doesn't help. I'd advice you to run the Tronscript. Read the manual first. reddit.com/r/TronScript/

No Skill Master - March 12, 2016, 1:42 pm

you can download adblocker. you can give it a go

This post here is some solid advice. Have you tried what he suggested yet?

Knautschtabak - March 14, 2016, 1:08 am

Hi Maxim the bot

Please read through the points below before we start. Read my instructions thoroughly, and carry out each step in the specified order.

Do not run any tools or take any steps other than those I provide for you. Independent efforts may make matters worse, and will affect my ability in providing the best set of instructions for you.

Please backup important files before proceeding with my instructions. Malware removal can be unpredictable at times.

If you come across any issues, please stop and inform me of the issue in detail. Do not hesitate to ask before proceeding.

I will notify you when I believe your computer is free of malware. The absence of symptoms does

not necessarily mean that your computer is clean.

If I do not reply within 48 hours, write a PM. I might have just overlooked your thread. Keep in mind that we likely live in different time zones.

I might abandon your thread if you do not reply within five days. I take only as many logs as I can handle.

Step 1: Farbar Recovery Scan Tool (FRST) ScanPlease download [Farbar Recovery Scan Tool \(x32\)](#) or [Farbar Recovery Scan Tool \(x64\)](#) and save the file to your Desktop.

Note: Download and run the version compatible with your system (32 or 64-bit). Download both if you're unsure; only one will run.

Right-Click FRST.exe or FRST64.exe and select Run as Administrator

Click Yes to the disclaimer.

Ensure the Addition.txt box is checked.

Click the Scan button and let the program run.

Upon completion, click OK, then OK on the Addition.txt pop up screen.

Two logs (FRST.txt & Addition.txt) will now be open on your Desktop. Copy the contents of both logs and paste them to [pastebin.com](#). Post the link here.

Step 2: TDSSKiller ScanPlease download [TDSSKiller](#) and save the file to your Desktop.

Right-Click TDSSKiller.exe and select Run as Administrator

Click Change parameters. Place a checkmark next to Detect TDLFS file system and Verify file digital signatures.

Click Start Scan. Do not use the computer during the scan.

If objects are found, change the action to skip.

Click Continue and close the window.

A log will be created and saved to the root directory (usually C:\). Paste the file contents to [pastebin.com](#) and post the link in your next reply.

In your next reply I get from youFRST.txt

Addition.txt

TDSSKiller log

Do what Knautschtabak said, even if you did what I told you to, still do as he says.

This can clear things up for us / him, if you are now "clean" or not.
