Thread: [Good place to purchase Spoofed Servers? Ampnode resells at this place!](#)

tim - March 13, 2016, 11:57 am

Hostwinds.com

They sell some nice dedi's that spoof. I see ampnode reselling from them.

Pretty good host.

AMPNODE resells for Hostwinds.com

Proof-

Ampnode- <http://prntscr.com/aeung3> and <http://prntscr.com/aeuo2i> and <http://prntscr.com/aeuo8t>

Hostwinds- <http://prntscr.com/aeuof1>

Hostwinds- <https://clients.hostwinds.com/cart.php?a=add&pid=185>

Ampnode- <http://ampnode.com/billing/cart.php?a=confproduct&i=1>

So now you may buy servers without paying for curved prices. Enjoy.

Well, now you can get your own servers!

oParoxysm - March 13, 2016, 12:38 pm

I've talked to their support and from what I hear, spoofing is not allowed what so ever. If I can accurately recall, they said that spoofing is enabled, but is not allowed. Despite what's previously stated, Ampnode openly allows spoofing and scanning. I don't think Ampnode would resell from a company who is strictly against it.

Strictly spoofing. I specifically asked them about spoofing so I could ask the follow up question of how they stop spoofed traffic and if it's automatic or manual. Don't just assume.

If you ddos on their network they will suspend.

If you try to spoof you will not be able to do so as it is not enabled.

If you are trying either and/or if you get an abuse report your account and server will be terminated

from site.

Good luck.

jimmix is obsessively giving hf bad advice.

And ftr, good luck trying to give away any of amptime's datacenters because every server on the site does exactly as it says whether scanning or spoofing and the owner works with datacenters to be able to do so unlike you jimmix trying to make a quick buck by lying to other users and resell s*** just because you think you caught a good deal.

Sad
