Thread: [GoDaddy .com Domains for \\$0.99 - Coupon Code](#)

Romario - March 14, 2016, 2:36 pm

I saw on a site where I was looking for some other coupons and noticed that .com Domains on GoDaddy cost \$0.99 so I bought a domain for my self and want to share with you.

To register your domain for one year it would cost \$8.00 then type the coupon cjccoup99 and after that the price will be reduced.

But if you want to reduce the ICAN FEES too, change the country to an poor country in Africa and you will not have FEES.

Nope you can't, godaddy doesn't accept paypal.

Anyways, I've bought about 10 domains already with this code. It's been around for more than an year now. Just register a new account with a new IP and use it again .

Thanks, amazing find. I usually check a lot of coupons site before buying anything, but those are all bullshit, showing not working coupons and deals, all expired. This one works :) Have a nice day !

Well, I can help you solve your Coupon problems.

1. Download the Chrome Extension: Honey ([Click Here](#))
2. If the Coupon available on site it will scan for all those coupons to get you the cheapest possible.

"Some promotional codes are not compatible with PayPal and, if you are using them, will not give you the option to add PayPal to your account nor process orders with PayPal." Soo you won't be able to pay with paypal if you use your \$0.99 code :P .

Slice of Life - March 22, 2016, 7:59 am
