Thread: [\[FREE\] True DNS | SECURE, RELIABLE and UNLIMITED Free Dynamic DNS Service | NO LOGS](#)

Punkbastard - March 16, 2016, 12:01 pm

Y TrueDNS discontinued: Domain Blacklisted (Spamhaus)

New service released: Punk DNS: A bulletproof, premium, no logs DNS service.

ciklamo54 - March 16, 2016, 12:04 pm

Glad to see a new free DNS service on HF.

How safe is this for using RATs ?

Armada - March 16, 2016, 12:12 pm

And the count down begins.....

We need more of these services created to fight the Spamhaus crap.

Nice share.

Cecilia - March 16, 2016, 4:54 pm

Nice job on the site, good luck with it all :)

Sogomn - March 16, 2016, 5:13 pm

Uh, a new DNS service. Let's see how long this one lasts.

Oh, and thanks!

Volty - March 16, 2016, 6:25 pm

This will probably be shutdown within the month. :(

This is a legitimate DNS service. Remote Administration Tools are allowed as long as their not used as malware.

Don't complain if your dns is removed/blocked for this reason.

Also, a report abuse page is in development. DNS's used for malware can be reported at this page.

Nothing wrong with having a ton of free DNS services popping up, in case some go bust.

Thanks OP.

Purple Kief - March 17, 2016, 12:05 pm

Not that it matters to me, but if you want to keep this as legitimate as possible you should force users to PM you in order to create a dns.

This will make sure what happened to fagdns v1 doesn't happen to this service.

Great that you're offering a free service though. ?

Too much work on his end for a free service.

Essence - March 17, 2016, 4:50 pm

Welp, this one will most likely be down in about 1 - 2 months considering when FagDNS was being used everyone was saying "This is made by a really trusted user, it'll be up for a long long time. vouch for fagdns!"

Next thing you know I lose hundreds of slaves due to it going down, that's what I get for no paying for one I guess. :P

thx for the share though

sounds like you were using it to host malware anyway

It has nothing to do with 'fagdns going down' the server is the same, everything is the same. The only thing that went down was the 'domain'.

Please, learn how hosting/servers work before stating that the people were 'wrong' to say it won't go down.

Blame me if I'm wrong but I thought Fag DNS used Namecheap as registrar, a US based company.

True DNS is registered at an offshore domain registrar. So I hope this fixes the most.

Although TrueDNS's registrar is offshore, this doesn't mean you're allowed to host, transmit or distribute malware through True DNS.

Offshore doesn't mean shit.

We've used many registrars. Offshore ones are generally less powerful and have less power to battle spamhaus or similar blocklists/reports.

Namecheap has stuck up against spamhaus. It is a great registrar for that.

We were on spamhaus for 3 days when we got pulled on fishdns.

We were on spamhaus for a lot longer with namecheap. We get suspended for direct reports to namecheap.

Not if he wants to maintain the domain for as long as possible.

Don't worry fam, you will discover all of this gibberish shortly. Just wait till you get just ONE abuser in your service. ? You will learn ALL about the headache LaPanthre and me deal with daily lmao.

Thanks, we will see how it goes. I'll do my best to keep the service up and running and free from abusers.

And ofcourse for users, never rely on ONE single DNS service.

greencyberlink - March 21, 2016, 1:46 am

Happy to see free dns again on HF, hope it last. thanks anyway

?

Please let me know any bugs you come across.

I noticed a small bug in deleting a dns record, it's throwing an error the dns record can't be deleted. However the dns record is deleted, so no big problem. I'm working on this bug right now.

Disgusting - April 2, 2016, 3:36 pm

Trying this out! Hopefully it's better than freenom and freedns atleast.

Punkbastard - April 12, 2016, 1:03 pm

In the coming days I'll upgrade the login/registration system.

- New users need to verify their email address.
- A 'remember me' option will be added
- A 'forgot my password' will be added

ze aun - April 14, 2016, 11:42 am

thank you OP for this great to see another free DNS keep up the good work and will let you know of any bugs.

Kyotokatrov - April 14, 2016, 3:00 pm

More people need to enforce the "no malicious" rule so that DNS's don't have to be shut down. Look at fishDNS and fagDNS.

Fire_Fire - April 14, 2016, 4:43 pm

Vouch , this is a good service

own3d - April 15, 2016, 12:03 pm

appreciate the service, thanks ?

I do my best to keep abusers of this service. As every True DNS user accepts the terms and conditions containing the following:

Quote:You must not use this website to copy, store, host, transmit, send, use, publish or distribute any material which consists of (or is linked to) any spyware, computer virus, Trojan horse, worm, keystroke logger, rootkit or other malicious computer software.

I have the right to terminate any account found abusing the service.

I will take abuse reports very seriously and I'll keep an eye on malwareconfig.com ?

Does this still work? Says the site is down? What are the alternatives to free and paid dns?
