Thread: [\[Question\] How would you go about making GUI theme for c++ win32?](#)

calvv - March 16, 2016, 12:36 pm

As the title says. How would you design and create custom buttons, textboxes and form Layouts in a c++ win32 application? I tried to search but I did not know exactly what to search for so I am turning this question to you guys!

Example: Spoiler [\(Click to View\)](#) Normal -----> Custom

Aker15 - March 16, 2016, 1:05 pm

Do you know how to program in C++? Since if not don't even bother trying just go with C#. Easier for making Win32 Applications.

Or if your consistent on using C++, lookup QT Library, makes the GUI programming resonantly easier.

Or if you want to make a GUI using WINAPI: https://en.wikipedia.org/wiki/Windows_API

Cheers
