Thread: [Any chance for this site?](#)

sofake - *March 16, 2016, 11:13 pm*

The site is built with Zendframework, it is possible to browse the directories as shown below, which I suppose the .htaccess is not properly set up:

What possible attack can be done on this site? Is it possible to root/upload shell with these info?

Please PM if you could help, willing to pay for pentest/etc.
