Thread: [Batch to save command in same directory](#)

FULLAUTO - March 17, 2016, 3:10 pm

Hello Guys, great Forum!

I have a (i guess) easy question which is pretty hard for me to solve.

I want to use the Batch command "TASKLIST" to save the Tasklist to a USB Drive.

the Problem is:

If I use the command -> tasklist>C:\list.txt it will save the Tasklist to C:\list.txt

but i want to use the Batch on a USB drive, and if the guy puts in the USB drive (He is a little dumb) i want the batchfile to be saved automatically to the USB drive, but i dont know which Letter the USB drive get (i.e. E: or F: or D:)

how can i force the Batchfile on the USB to save the list.txt directly on the USB? Is there any possibility?

If the batch script run from USB drive then below command saves the text file to USB drive and folder batch script executed from.

Code @Echo Off & Cls

Tasklist > list.txt

Below command ask you to enter the USB drive letter and saves the text fie to USB drive

Code @Echo Off

:Start

Cls

@Echo.

@Echo.

@Echo Please Enter the USB Drive Letter. (X) & Set /p DriveLetter=^>

If "%DriveLetter%"==" " Goto :Start

Tasklist > %DriveLetter:~0,1%:\List.txt

Batch script works if you follow my instructions. I also tested on Windows 10 and batch script will run on almost all version of Windows O/S. I'm sorry i should have ask earlier do you know how to create a batch file? One second i just notice one command i should have add to batch script try below commands.

```
Code @Echo Off & Cls
Cd %~dp0
Tasklist > List.txt
```
